AI Skills 2021

Ana Echeverri

Technology Adoption is accelerating, yet skills gaps are the #1 barrier

Technologies likely to be adopted by 2025 (by share of companies surveyed)

World Economic Forum
Future of Jobs
2020

Skill Gaps are the #1 barrier to technology adoption

Data Scientists and AI Specialists... Highest skills demand

Increasing demand

1	Data Analysts and Scientists
2	AI and Machine Learning Specialists
3	Big Data Specialists
4	Digital Marketing and Strategy Specialists
5	Process Automation Specialists
6	Business Development Professionals
7	Digital Transformation Specialists
8	Information Security Analysts
9	Software and Applications Developers
10	Internet of Things Specialists
11	Project Managers
12	Business Services and Administration Managers
13	Database and Network Professionals
14	Robotics Engineers
15	Strategic Advisors
16	Management and Organization Analysts
17	FinTech Engineers
18	Mechanics and Machinery Repairers
19	Organizational Development Specialists
20	Risk Management Specialists

Future of Jobs Survey 2020, World Economic Forum.

Data and AI

- 1 Artificial Intelligence Specialist
- 2 Data Scientist
- 3 Data Engineer
- 4 Big Data Developer
- 5 Data Analyst
- 6 Analytics Specialist
- 7 Data Consultant
- 8 Insights Analyst
- 9 Business Intelligence Developer
- 10 Analytics Consultant

Engineering

- 1 Python Developer
- 2 Full Stack Engineer
- 2 Javascript Developer
- 4 Back End Developer
- 5 Frontend Engineer
- 5 Software Developer Dotnet
- 7 Development Specialist
- 8 Technology Analyst

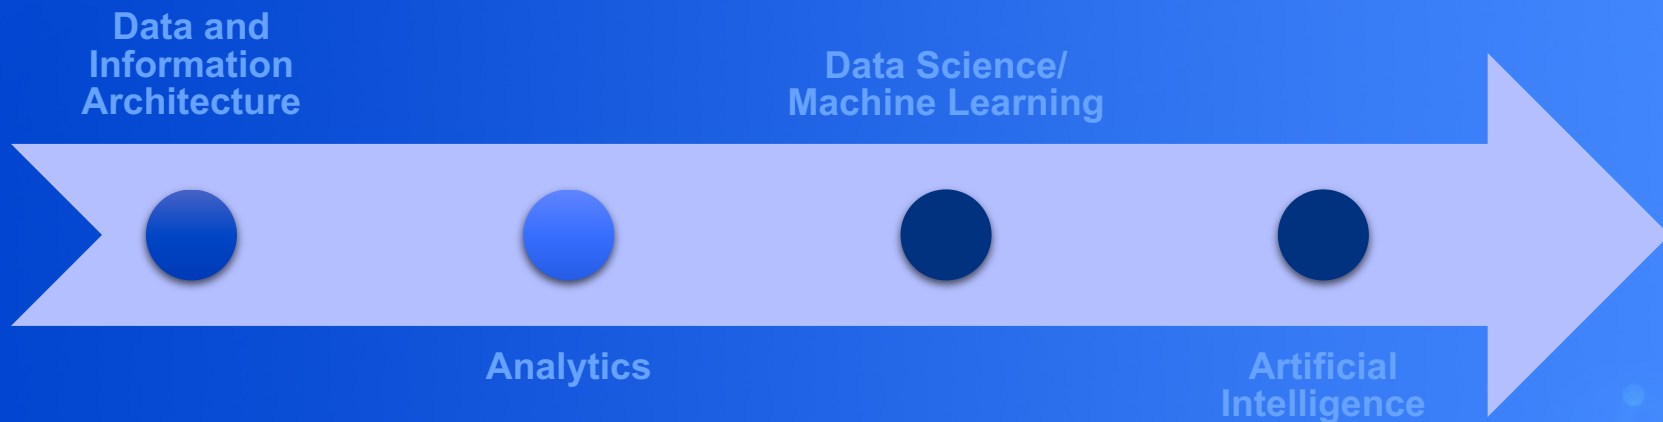

"Every company will
become an AI company."

Arvind Krishna, IBM's CEO

On the road to AI, a continuum of skills is essential

Skills development in DS, ML and AI are strategic in preparation for a world of embedded AI

What is AI?

What does it mean to me?

Defining Intelligence in Humans

Interact with the world through our senses

Ability to
learn

Ability to
reach
conclusions

Ability to
make
decisions

Ability to
explain
decisions

Defining Artificial Intelligence

which aims to simulate human
intelligence using machines and data

Interact with the world through robotics, visual or speech recognition, text processing, tone/empathy analysis, etc.

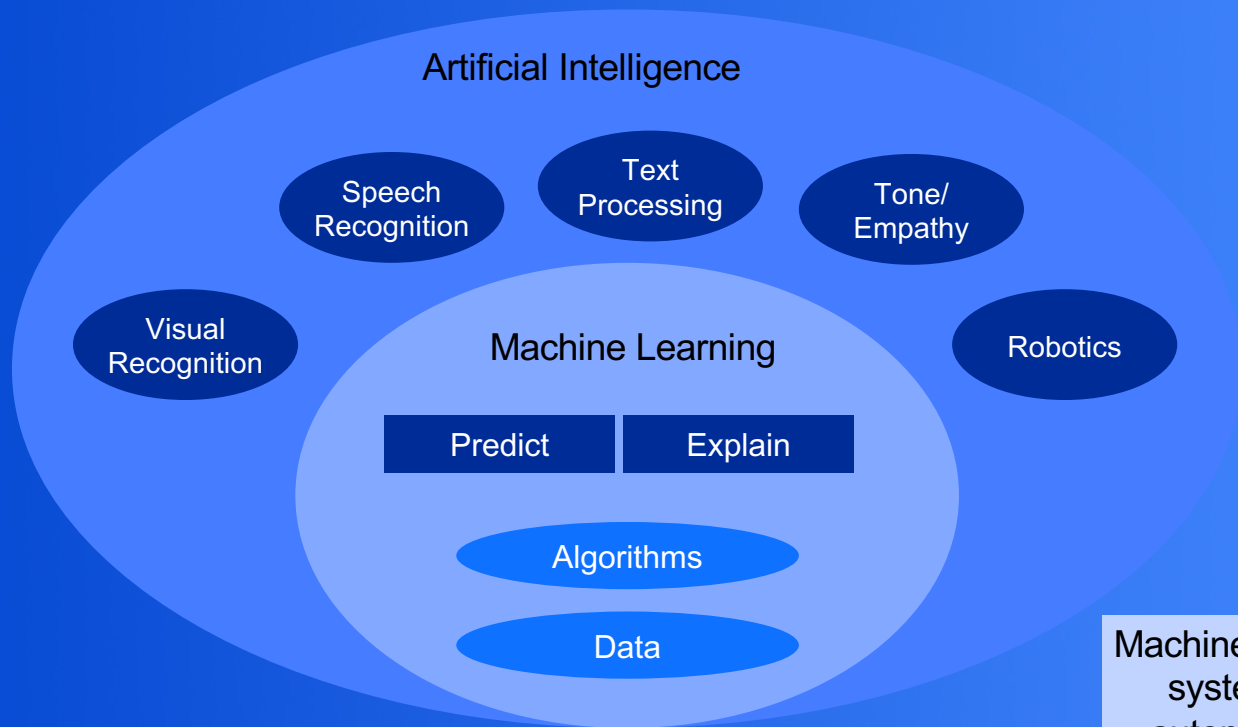

Ability to
learn from
data

Ability to
reach
conclusions

Ability to
make
decisions

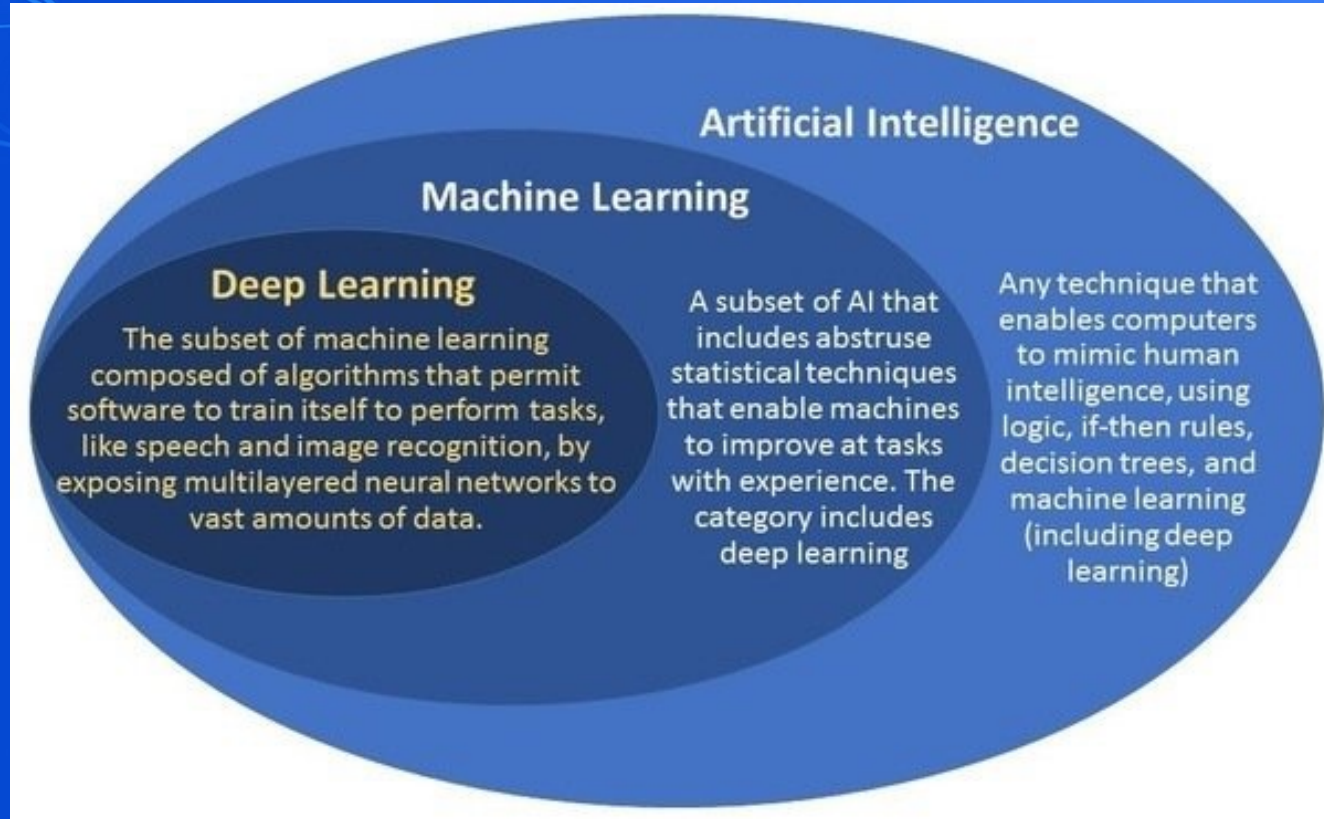

Ability to
explain
decisions

This is AI in a nutshell

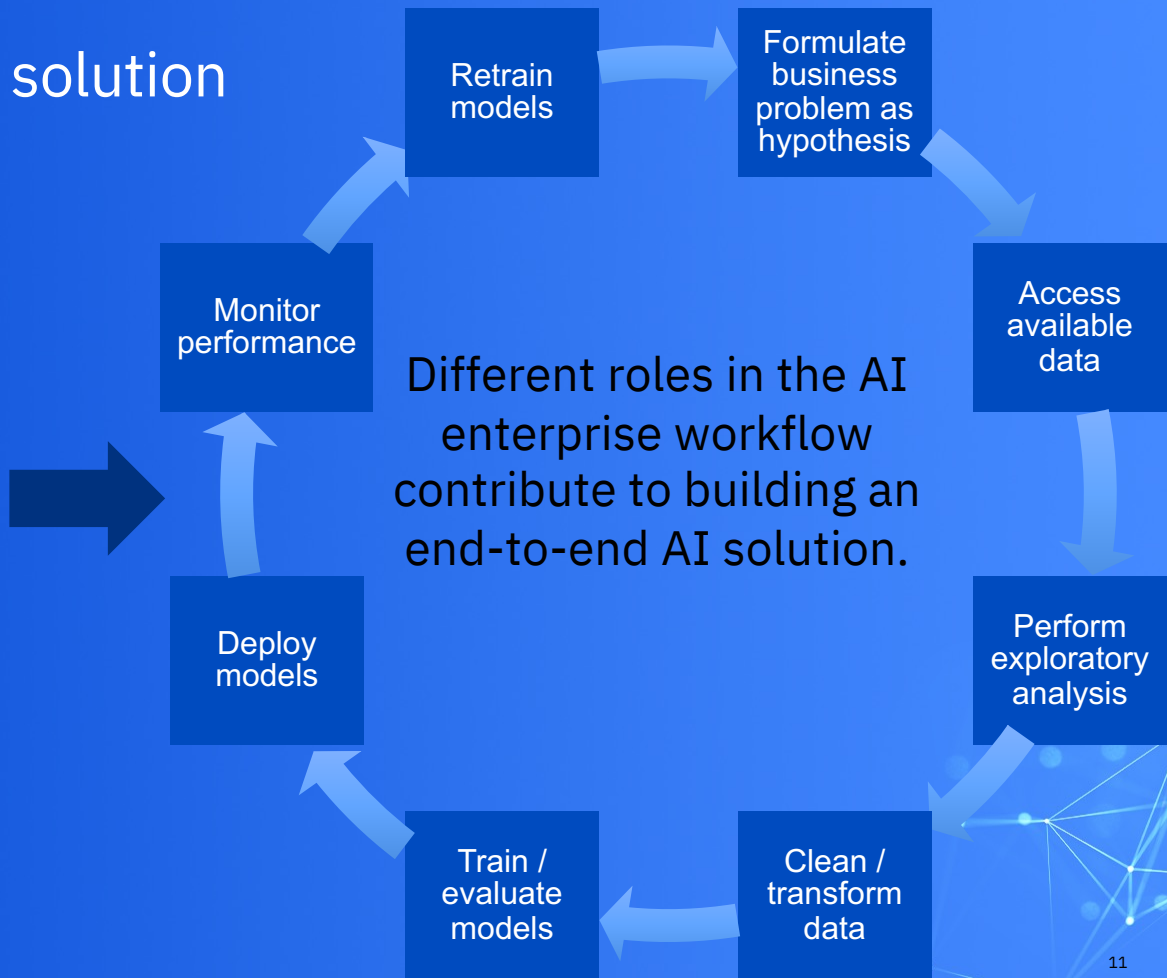

Machine Learning provides systems the ability to automatically learn and improve from experience without being explicitly programmed

New skills are required beyond “Learning a new product”

AI Implementation Cycle

Building an end-to-end AI solution

Skills needed for AI implementation

Skill development is often necessary when shifting toward AI.

Some existing roles need to evolve for successful adoption of AI:

- Business stakeholder
- Business analyst
- Developer
- DevOps/IT

Business Stakeholder

Business Analyst

Developer

DevOps/IT

Skills needed for AI implementation

About these roles:

- **Business stakeholder:** Understand the AI process and solution business value, use data to inform business problems, be familiar with hypothesis testing, and monitor AI solutions.
- **Business analyst:** Understand the AI process and success indicators, apply knowledge of metrics and provide business metrics reporting, and apply new insights into the business strategy.
- **Developer:** Continuously develop AI skills, schedule and monitor package releases, oversee the monitoring process, and support DevOps.
- **DevOps engineer:** Develop and maintain platform solutions / pipelines for AI implementation.

Business Stakeholder

Business Analyst

Developer

DevOps/IT

Skills needed for AI implementation

Talent and workflow needs for AI are different than the typical organization.

Other roles may or may not exist in your organization.

- Data engineer
- Data scientist
- User researcher / designer
- Data steward

Data Engineer / IT

Data Scientist

**User Researcher /
Designer**

Data Steward

Skills needed for AI implementation

About these roles:

- **Data engineer:** Architect highly scalable data systems and ensure data is ready for machine learning (ML) applications.
- **Data scientist:** Identify MVP use cases, develop predictive models, build ML pipelines, recommend AI algorithms and methods.
- **User researcher / designer:** Design methods and collect data for business use cases.
- **Data steward:** Develops and utilizes data governance processes to support data quality, usability and evaluation.

Data Engineer / IT

Data Scientist

User Researcher /
Designer

Data
Steward

AI Literacy

Knowledge for everyone – Technical and Non-Technical Roles

What is Data
Science

What is Artificial
Intelligence

What business
goals can I
impact through
AI?

Which
technology
capabilities can I
use?

What data do I
need?

How do I think
about AI in my
business?

AI Literacy

Learning Path Recommendations:

Coursera.org/ibm

AI Foundations for Businesses (20 hours)

- Introduction to AI
- What is Data Science?
- Elements necessary to build AI Solutions in an organization

Introductory

Introduction to Data Science (4 months)

- Working with data
- Tools
- Methodologies
- Databases and SQL

Foundational

AI Foundations for Everyone (3 months)

- ML, Deep Learning, AI definitions
- AI Applications, Use Cases
- Ethical Concerns with AI
- Build a simple chatbot

Foundational

Contextual AI Knowledge

Leveraging pre-built frameworks– Technical Roles

Working with
complex data types

Human - AI
Interaction

Visual Recognition:
working with images,
videos

Natural Language
Processing

Tone and Empathy

Working with
complex documents

Using deep learning
frameworks (i.e.:
Keras, Pytorch,
Tensorflow)

Scaling ML models
with Spark

Contextual AI Knowledge Learning Path Recommendations: Coursera.org/ibm

Applied AI (7 months)

- AI Applications/Use Cases
- IBM Watson Services and APIs
- Limited coding skills are used to build AI applications through the integration of Watson Services

Beginner

AI Engineering (8 Months)

- Utilize libraries such as Keras, Pytorch, Tensorflow applied to industry
- Object Recognition and computer vision
- Image and video processing
- Text analytics, Natural Language Processing
- Recommender systems

Intermediate

Building AI Solutions

Building Models from scratch

Probability, Statistics,
Linear Algebra

Computer
Programming
(Python, R, Scala)

Business Domain
Knowledge

Data Science
Methodologies

Data Preparation

Data Visualization

Model Building
(Supervised/Unsuper
vised/Deep/Reinforc
ement)

Model Validation and
Selection

Building AI Solutions

Learning Path Recommendations:

[Coursera.org/ibm](https://www.coursera.org/ibm)

Data Science Certificate (10 Months)

- Tools
- Methodologies
- Python for DS
- Databases
- Data Analysis
- Data Visualization
- Machine Learning

Beginner

Advanced Data Science (4 Months)

- Scalable Deployments
- Signal Processing
- Deep Learning Frameworks: Keras, Tensorflow, Pytorch

Advanced

ML for the Enterprise (3 months)

- Exploratory Data Analysis
- Supervised Models
- Unsupervised Models
- Deep Learning
- Reinforcement Learning
- Survival Analysis
- Time Series

Advanced

AI Enterprise Workflow (4 months)

- Simulation of a real-world scenario
- Connecting Business priorities to technical implementations
- Connecting OSS (Python) to IBM Technologies
- Connecting ML to specialized AI models - Visual Recognition and NLP
- Model Deployment AI in Production

Advanced
