

IBM Security

2022 Master Skills University

September 12–15, 2022
Hollywood, Florida

Let's create security that
protects your data anywhere.

Verify Access and Verify SaaS

This is a draft agenda. Subject to change.

Monday, September 12

Meet Verify's Product Management, Development, Support, Security Expert Labs, and Tech Sales Leadership — Meet Verify's senior leaders and unpack the strategic direction of the IBM Security Verify Portfolio. Expect roadmap sessions, support updates, and migration stories.

Tuesday, September 13

Deployment and Architecture Best Practices using Verify Access and Verify SaaS — Explore Verify Access deployment options and architecture best practices covering concepts such as containers, the application gateway, and hybrid patterns with Verify SaaS.

MFA Everywhere Lab with Windows, RADIUS, Linux, AIX — Apply multi-factor authentication with Verify SaaS and/or Verify Access by extending MFA and Strong Authentication to just about anywhere including Windows, RADIUS, Linux, AIX.

Fido2 Lab — Learn what the biggest names in tech are building to eliminate passwords and secure user accounts with Fido. Then participate in a lab to incorporate Fido as a factor within ISVA and ISV SaaS.

High Volume Database Tuning with AAC and Federation Session Persistence — Discover additional methods to tune your Verify Access Database to optimize availability, performance, scalability, and cost.

Client Roundtable — We will review the day's presentation and address any additional questions.

Wednesday, September 14

Modernization Lab with the IBM Application Gateway (IAG) including transformation rules — The application gateway can help modernize any access management deployment. This lab will include setting up the application gateway, building transformation rules with the newly launched Lua scripting language, and automatic export of webseal to IAG.

OIDC Best Practices and Open Banking — Deep dive lab on updated OIDC standards. Apply OIDC in context of Open Banking including client-initiated backchannel authentication and context based authentication.

Exploring the new embedded WAF — Explore the new embedded WAF replacement. Learn how to enable, configure, and customize the rule set.

Client Roundtable — We will review the day's presentation and address any additional questions.

Thursday, September 15

Tips and tricks for upgrading ISVA — Learn from Verify SMES, support, and Security Expert Labs, the best tips and tricks while upgrading ISVA.

Verify SaaS integration with external systems via Webhooks Lab — Conduct hands-on exercises to integrate event notification and external risk assessment via webhooks.

Consumer IAM Lab — Explore cutting edge concepts around Consumer IAM, including passwordless authentication, theme customization, Data Privacy and Consent Management and more.

Client Roundtable — We will review the day's presentation and address any additional questions.

Meet the Experts

Verify Support Table — IBM Security Verify Support will be presenting sessions and staffing a table to address questions.

IBM Security Verify Privilege Table — IBM's top PAM Experts will also be at the event to discuss trends in the PAM market and to address any questions.
