IBM App Connect Enterprise
## No automation without Integration

## Introducing the new App Connect Enterprise Discovery Connectors.

Developers can now easily integrate SaaS, Cloud services with traditional Enterprise endpoints using the new discovery connectors in combination with the existing palette of 100+ message flow nodes.
The new discovery connectors connect to external services, assemble the required configuration and retrieve JSON schemas making it easy to combine new cloud application endpoints with more traditional back-end systems, protocols and message formats.
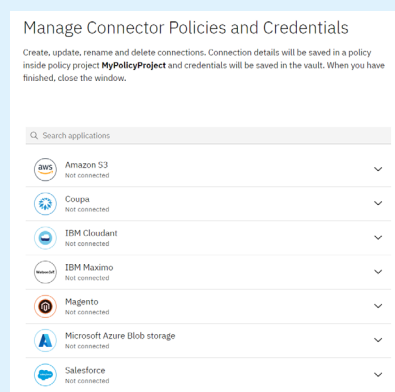

Launch Connector Discovery and follow an easy guided experience for connecting to the online application and applying configuration.

Drag and Drop the new Discovery Connector message flow nodes from the Toolkit palette on to the message flow canvas.

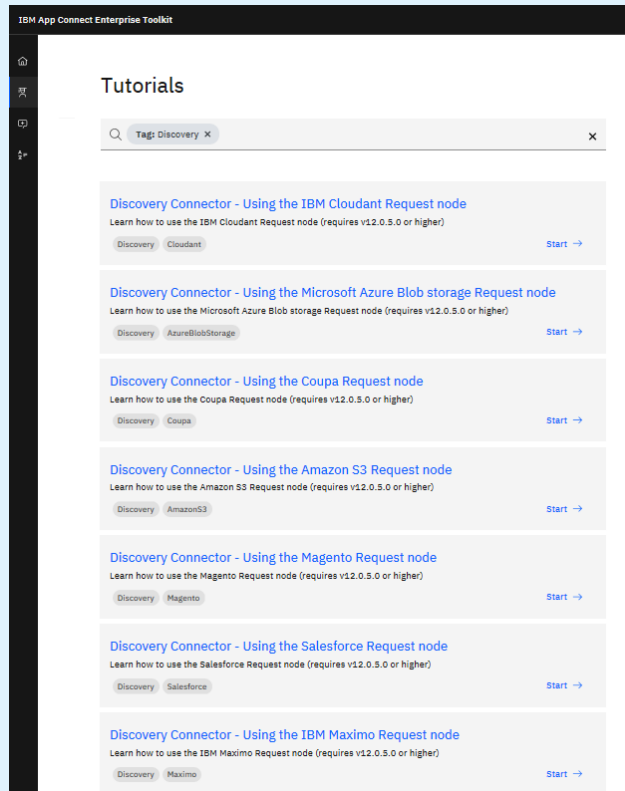

Check out the new easy-to-use Toolkit interface for managing Discovery Connector connection information.

- *Create, update, and delete connections.*

- *Use the App Connect Enterprise vault to securely store encrypted credentials with a variety of auth types.*

- *Use App Connect Enterprise policies to define endpoint URLs.*

Quickly get started with this new capability today, using the new Tutorials for guidance.

Use the existing rich array of Toolkit capabilities to exercise flows, write unit tests and visual step-through debugger.

Each connector issues synchronous requests to create, retrieve, update, delete or view a wide variety of objects

Amazon S3
Buckets, Object ACLs, Object tags, Objects.

Coupa
Addresses, Exchange rates, Expense reports, Inventory transactions, Invoices, Lookup values, Purchase orders, Remit-to addresses, Suppliers, Users.

IBM Cloudant
Attachments, Databases, Documents, Views.

IBM Maximo
Assets, Companies, Contracts, Crafts, Labors, Locations, Person groups, Person users, Service addresses, Service requests, Work orders.

Magento
Attribute sets, Carts, Categories, Customer groups, Customers, Products, Sales credit memos, Sales invoices, Sales orders, Sales rule coupons, Sales rules, Sales shipments.

Microsoft Azure Blob storage
Append blobs, Blob services, Blobs, Containers, Page blobs, Snapshots, Versions.

Salesforce
Accounts, Attachments, Campaigns, Cases, Contacts, Content documents, Events, File shares, Files, Folders, Leads, Opportunities, Orders, Products, Solutions.

These are just some of the examples of actions available for each connector, there are many more.
