Highlights

- Supports complex, unique requirements for multiple customers and value-add service offerings
- Ensures accuracy in customer billing and inventory
- Includes native support for wireless infrastructure, radio frequency (RF) and barcoding
- Offers flexible, real-time task updating- paperlessly!
- Integrates with all popular ecommerce shopping carts including Amazon, Shopify, Magento and ZenCart
- Improves customer satisfaction with dock door scheduling and 24/7 customer portal access

IBM i and Logimax Software

The Best WMS on IBM i

In today's world, it's up to the logistics experts to get the right product to the right buyer at the right time. For physical items, that requires the integration of production, inventory, materials handling, picking and packaging, and transportation.

For warehouse and logistics, operational efficiency and profitability depend on accurate, real-time data and communications tools within a technology solution that can optimize everything from where products are stored to each worker's daily tasks.

Logimax is a robust, reliable and affordable warehouse management software (WMS) solution for the challenges faced by manufacturers and logistics providers in warehousing and distributing products. This IBM i-native software is offered on-premise or cloud-based.

The Logimax solution's foundation includes complete inventory management, powerful and flexible 3rd-party billing, innate RF (radio frequency data capture, bar coding) and labeling support, and easily customizable reporting tools. By itself, this foundation is more capable than many fully-loaded WMS solutions.

Additional modules are available to customize the system in ways that further enhance productivity, profits, and service capabilities:

- Customer Web Self-Service
- eCommerce/EDI/Shopping Cart Integration
- Repack/Assembly Management
- Warehouse Task Automation
- Cross-Dock Management
- Yard Management and Door Dock Scheduling

Key Benefits

Improve Customer Satisfaction with Improved Accuracy

Logimax WMS is a completely integrated, multi-customer inventory management and third-party billing system, with the ability to support even the most unusual functional and billing requirements.

Every Customer has a unique profile in the system. Each of their stored or assembled items also has a profile. With Customer and Item Profiles in the system, every inventory and service transaction is recorded and subject to the software's built-in Rate Master. Working together, and tightly integrated with the online Appointment Book, these profiles enforce each customers' business processes so that the proper rates are being charged per their service contracts. No more customer complaints about their invoices. Accuracy is embedded in the Logimax system!

This enables users to focus on enhancing their customer relationships and service levels, building profit margins and generating new business.

Faster Return on Investment: 1 Week to Install

It typically takes less than one week to install the Logimax Foundation and to complete the Customer and Item Profiles. With training and testing, most customers are live on the system within a month. This speed enables Logimax customers to begin generating a return on their investment right away.

Increase Productivity with Flexible, Paperless Automation

Logimax's Warehouse Task Automation module (Logimation) enables on-the-fly task assignments and real-time task visibility for every warehouse process and activity. Logimation assigns tasks (via RF) using advanced task logic that considers task type and equipment as well as predefined rules, task priorities and the Appointment Book.

When an unexpected delivery or last-minute order comes in, the supervisor can re-assign a user to that task on the fly. The user simply interleaves their current activity, performs the new task, then returns to his or her previous activity. Every warehouse task and process is automatically monitored, in real-time, providing supervisors and managers with the ability to dynamically manage the warehouse without paper.

Customer Testimonials

"Logimax systematically simplifies the process of receiving and shipping materials." - Eric Coleman, Ashland Cold Storage

"With Logimax, we have the ability to change programming to meet our customers' needs." - Sue Forester, Strategic Warehousing

Why IBM and Logimax?

Logimax and IBM have a strong partnership focused on our joint customers.

Logimax is powered by IBM i and Power Systems, delivering the highest availability and reliability to our customers, the industry's most advanced development and support toolset, and the lowest cost of ownership of any of the currently available hardware and software platforms.

In addition, Logimax is already integrated with Friedman Frontier ERP software and Varsity Logistics Shipping Software, both IBM-native applications.

Several companies are using two or three of these products for a seamless supply chain experience.

Since 1995, Logimax has provided our customer base with exceptionally robust, reliable and affordable warehouse management solutions.

Logimax Inc is a part of FOG Software Group, a wholly owned subsidiary of Constellation Software.
