

## **C1000-097: IBM Cloud Pak for Automation v20.0.1 Solution Architecture Sample Questions**

097.4.4.11

How is Automation Digital Worker (ADW) applied compared to Robotic Process Automation with Automation Anywhere (RPA)?

- A. ADW orchestrates the backend, while RPA integrates with the frontend.
- B. ADW should handle multiple cases, roles, and tasks, while a bot should be singularly focused.
- C. ADW is used whenever the bot execution needs to be co-located with the user.
- D. ADW should be used as middleware when integrating with other IBM Digital Business Automation suite items.

097.2.1.8

Which interface does Content Analyzer provide to FileNet Content Manager?

- A. SOAP Web Service
- B. JMS
- C. REST API
- D. CORBA

097.1.1.17

The following snippet is pulled from a file used when upgrading Business Automation Insights to v20.0.1.

```
bai_configuration:
  setup:
    image:
      repository: <DOCKER_REGISTRY>/bai-setup
  admin:
    image:
      repository: <DOCKER_REGISTRY>/bai-setup
  ...
```

Which file was this pulled from?

- A. custom resource YAML file
- B. image pull secret file
- C. `upgradeOperator.sh` file
- D. `bai_studio.yaml` file

097.3.4.1

What can be used to configure User Management Service (UMS) to delegate the authentication of users to other identity providers?

- A. Identity and Access Manager (IAM) that is provided by IBM Common Services
- B. The email address of delegated user's IBM Cloud account
- C. An access token generated by REST API
- D. Any kind of third-party APP ID

097.5.2.5

Which two elements are used to correlate Business Automation Insights events?

- A. parent-span-id
- B. Instance-id
- C. span-id
- D. request-id
- E. correlation-id

097.2.3.3

Which statement is true for Natural Language Understanding (NLU) integration with Business Automation Content Analyzer?

- A. Users can select multiple NLU instances for a given Document Class.
- B. Users can select multiple NLU instances for a given Pattern.
- C. Users can select only one NLU instance for a given Document Class.
- D. Users can select only one NLU instance for a given Pattern.

097.4.2.6

Which tool should be used for straight-through processing with backend connectivity?

- A. Operational Decision Manager
- B. Workstream Services
- C. Business Automation Workflow
- D. Robotic Process Automation

097.1.2.3

Which two statements are true about installation of Cloud Pak for Automation using deployment patterns in OpenShift Cloud Platform (OCP) for demonstration purposes?

- A. OpenLDAP and DB2 need to be provisioned separately.
- B. A non-administrator user is used to run a deployment script.
- C. Master and infrastructure nodes need to be located on different hosts.
- D. Master and etcd nodes need to be located on different hosts.
- E. OCP Administrator sets up the cluster.

## **Answer Key**

097.4.4.11 B

097.2.1.8 C

097.1.1.17 A

097.3.4.1 A

097.5.2.5 A,C

097.2.3.3 A

097.4.2.6 C

097.1.2.3 B,E
