

IBM DevOps for Cloud Paks

Modernizing application delivery
DevOps governance with flow

@Al_Wagner
awagner@ca.ibm.com

IBM Cloud

Organizations shifting workload to the cloud

Run existing apps

Continue to run your apps, where they are.

Modernize existing apps

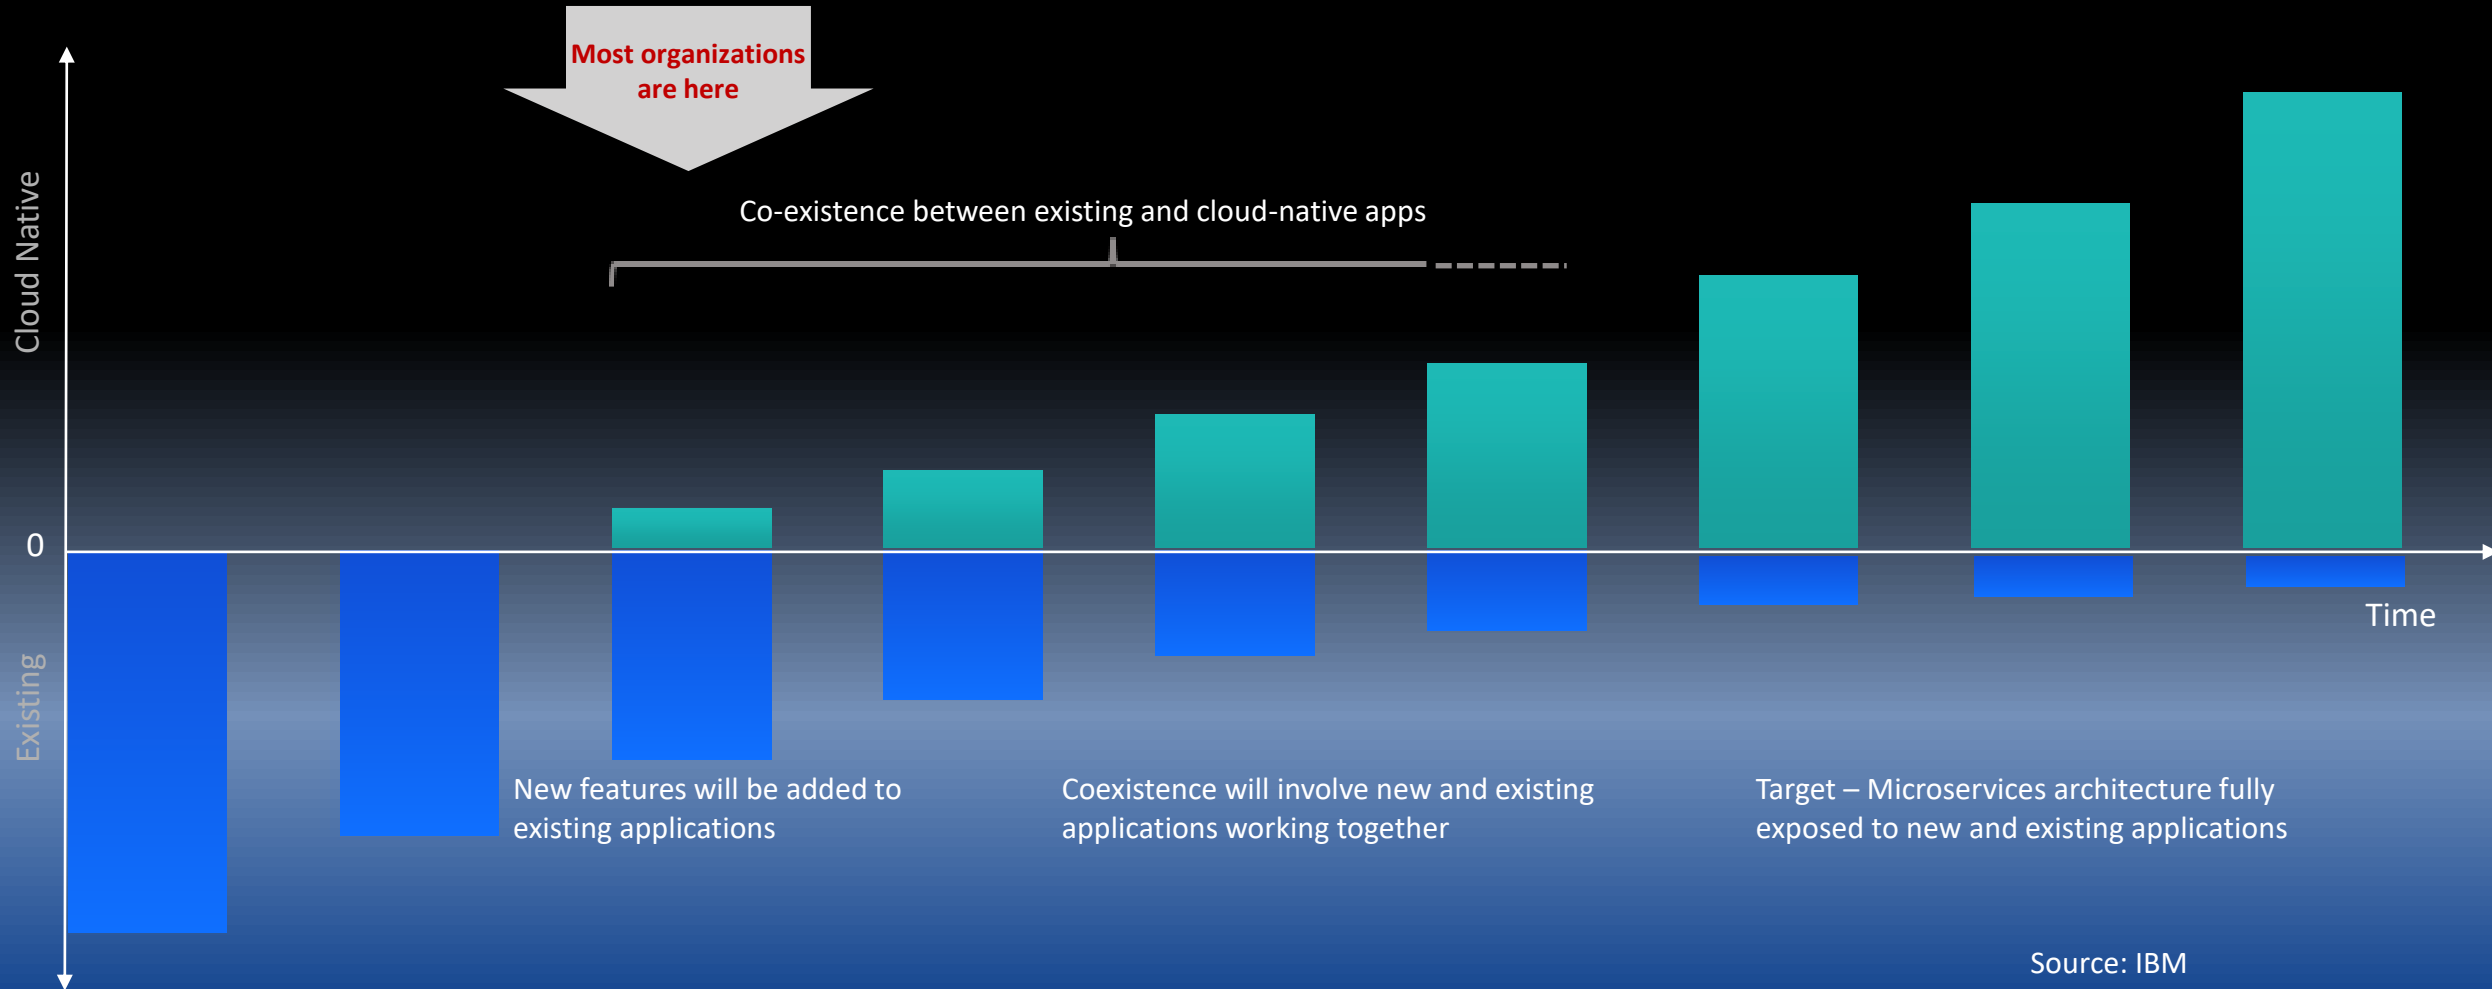

When apps need to move, IBM has the most experience, tools, and experts to move them

Build new apps

New apps are automatically ready for hybrid-cloud deployment, using the best of open source, fully supported

Existing Apps & Cloud Native will co-exist... *for the next 10+ years*

Source: IBM

Organizations are advancing their DevOps capabilities

Day 1: Continuous Delivery Pipeline

- ▶ Establish an automated, controlled path to production
- ▶ Starting point for many DevOps transformations. Clear ROI

Day 2: Scale, optimization, acceleration

Enterprise Scale & Insights

- Scale best practices across the enterprise
- Gain visibility to business value across many tools, pipelines and environments
- Support decades of technology platforms from mainframe to VMs to containers

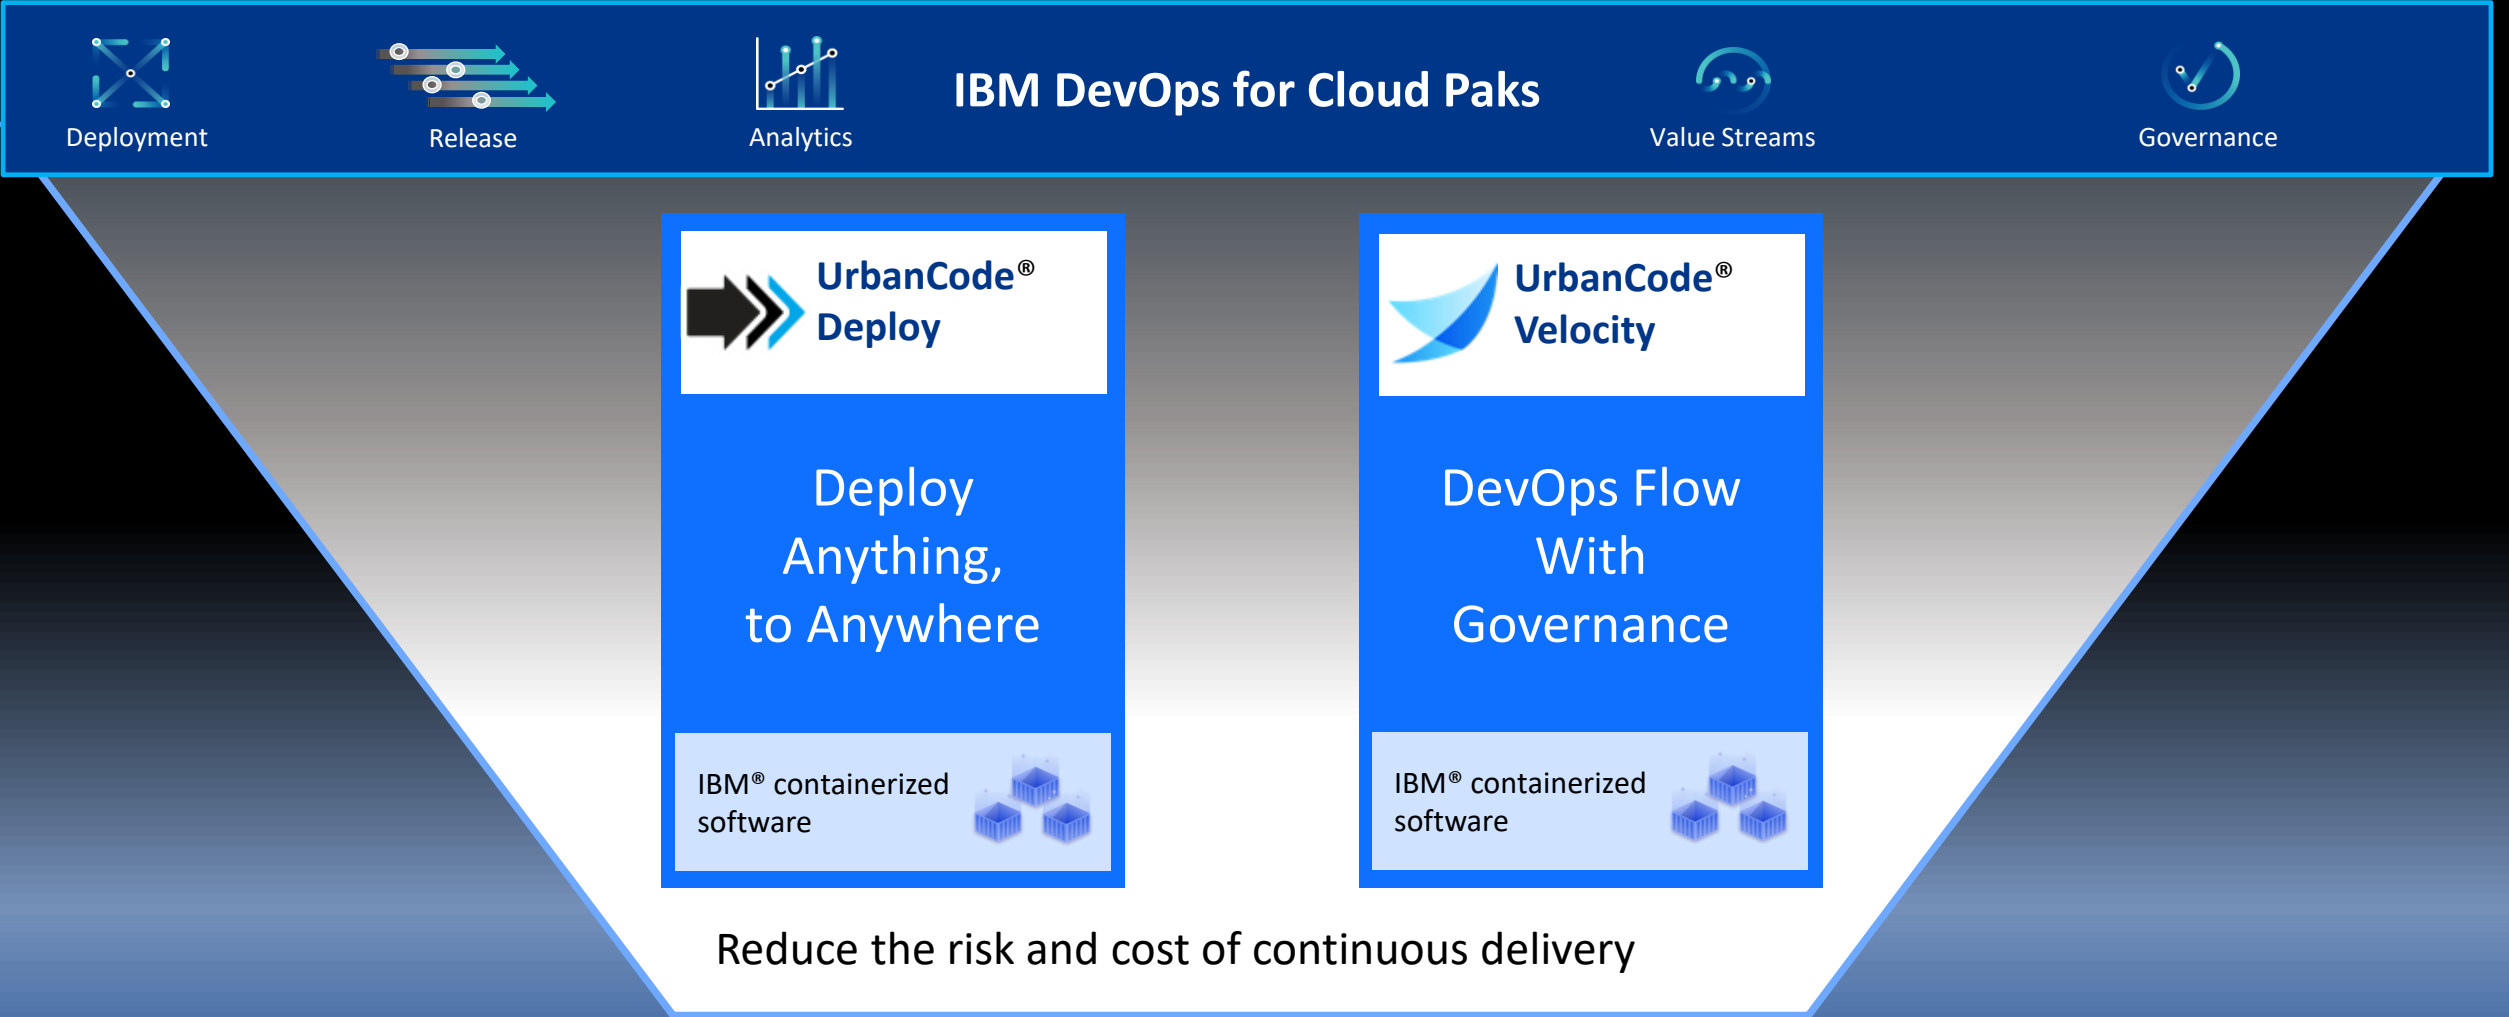

Value Stream Optimization

- Know what's where by reconciling Agile, testing and CI/CD data
- Visualize the flow of work
- Shift security, quality and governance practices left with Smart Gates

Production Release Acceleration

- Increase the frequency of complex releases by simplifying setup and streamlining execution
- Digitize release process: approval flows, implementation plans & orchestrate interactions with systems like ServiceNow and Jira

IBM DevOps for Cloud Paks

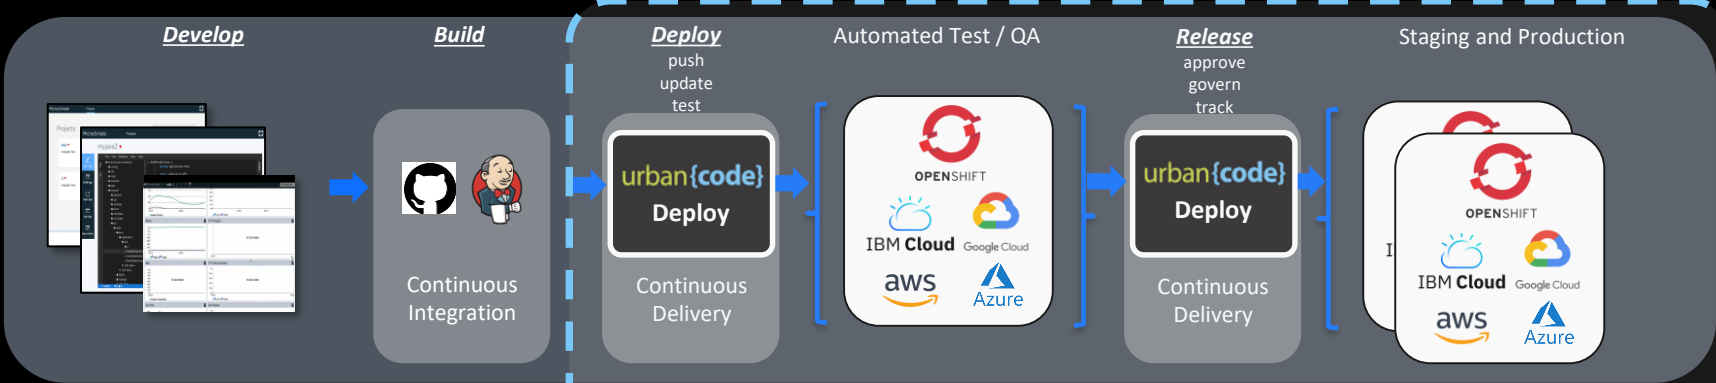

Connects Cloud Native and Traditional on premises

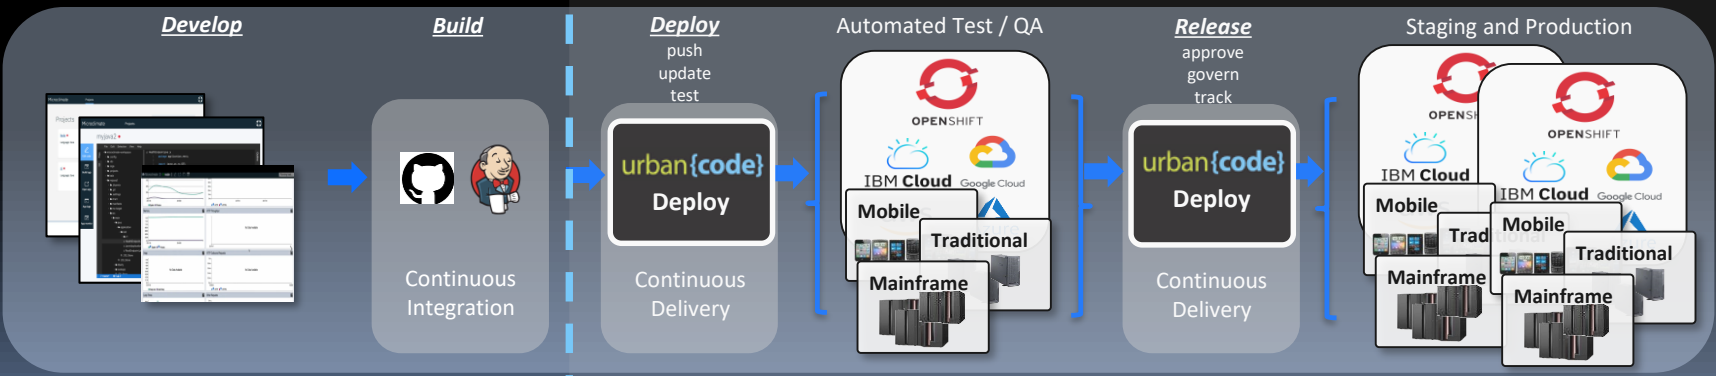

IBM DevOps provides continuous delivery without boundaries

*Deploy
Anything
Anywhere!*

Cloud Native

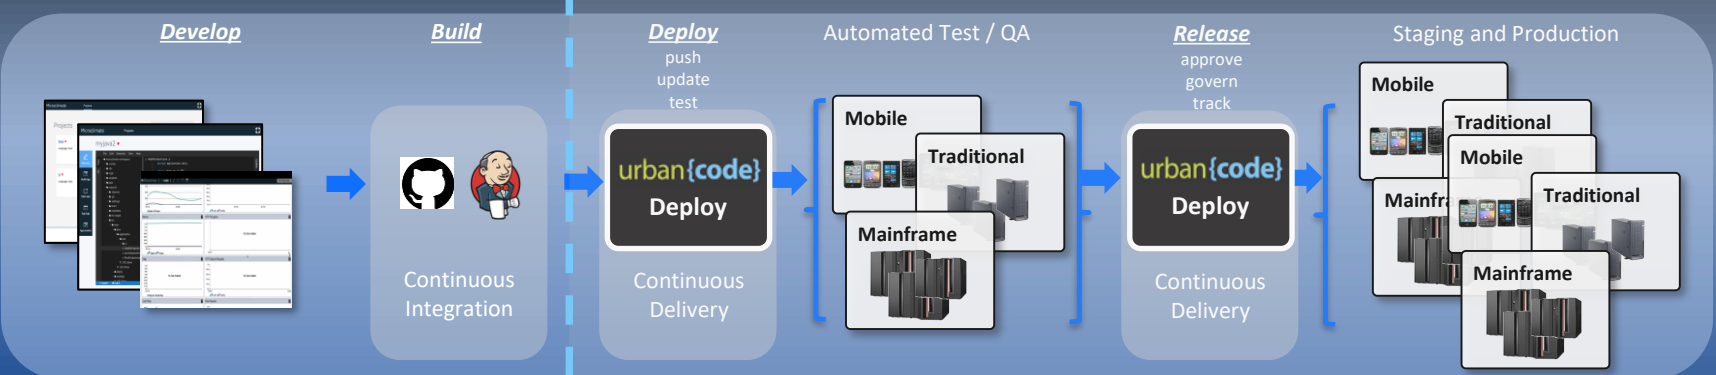

Hybrid Cloud

Traditional

*DevOps
Governance
with Flow!*

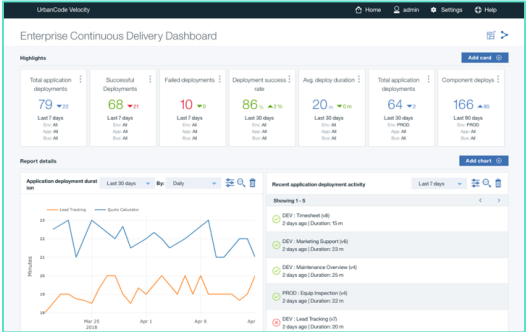

urban{code} Velocity

Why UrbanCode Velocity

UrbanCode Velocity makes data visible and actionable. DevOps governance with FLOW!

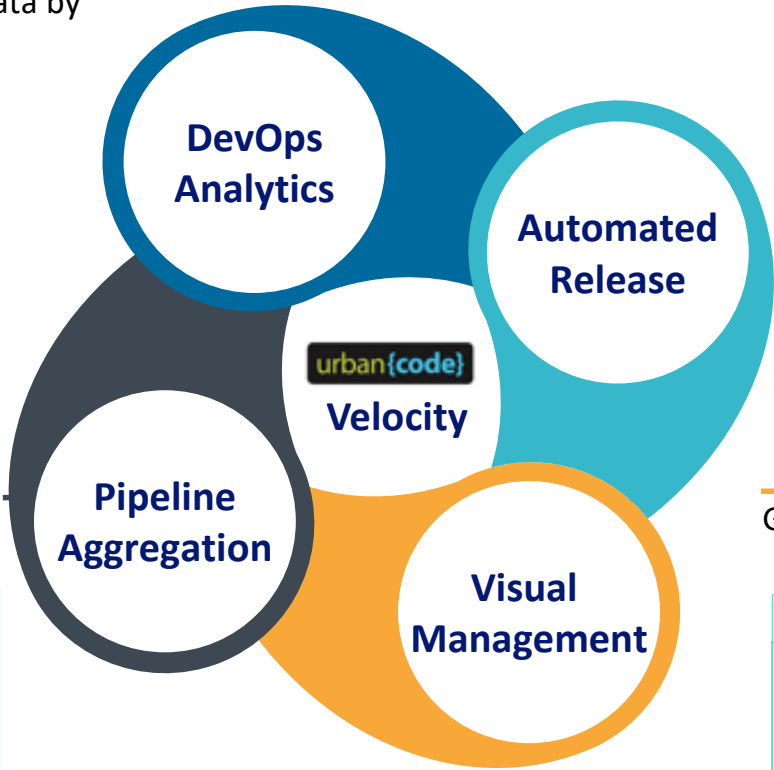

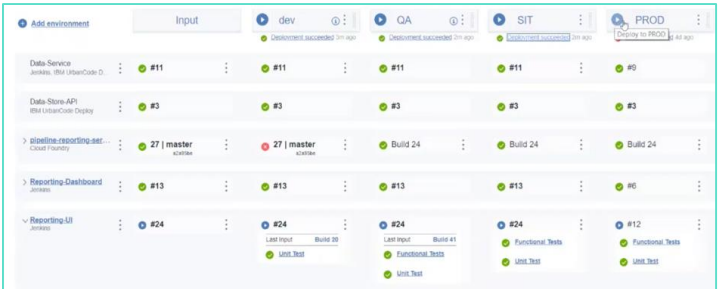

Transformation Leaders

Realize the value of hidden continuous delivery data by making it visible and actionable

Development Teams

A single view for all of the team's Pipelines.

Release Teams

Move to more frequent releases with light-weight release management

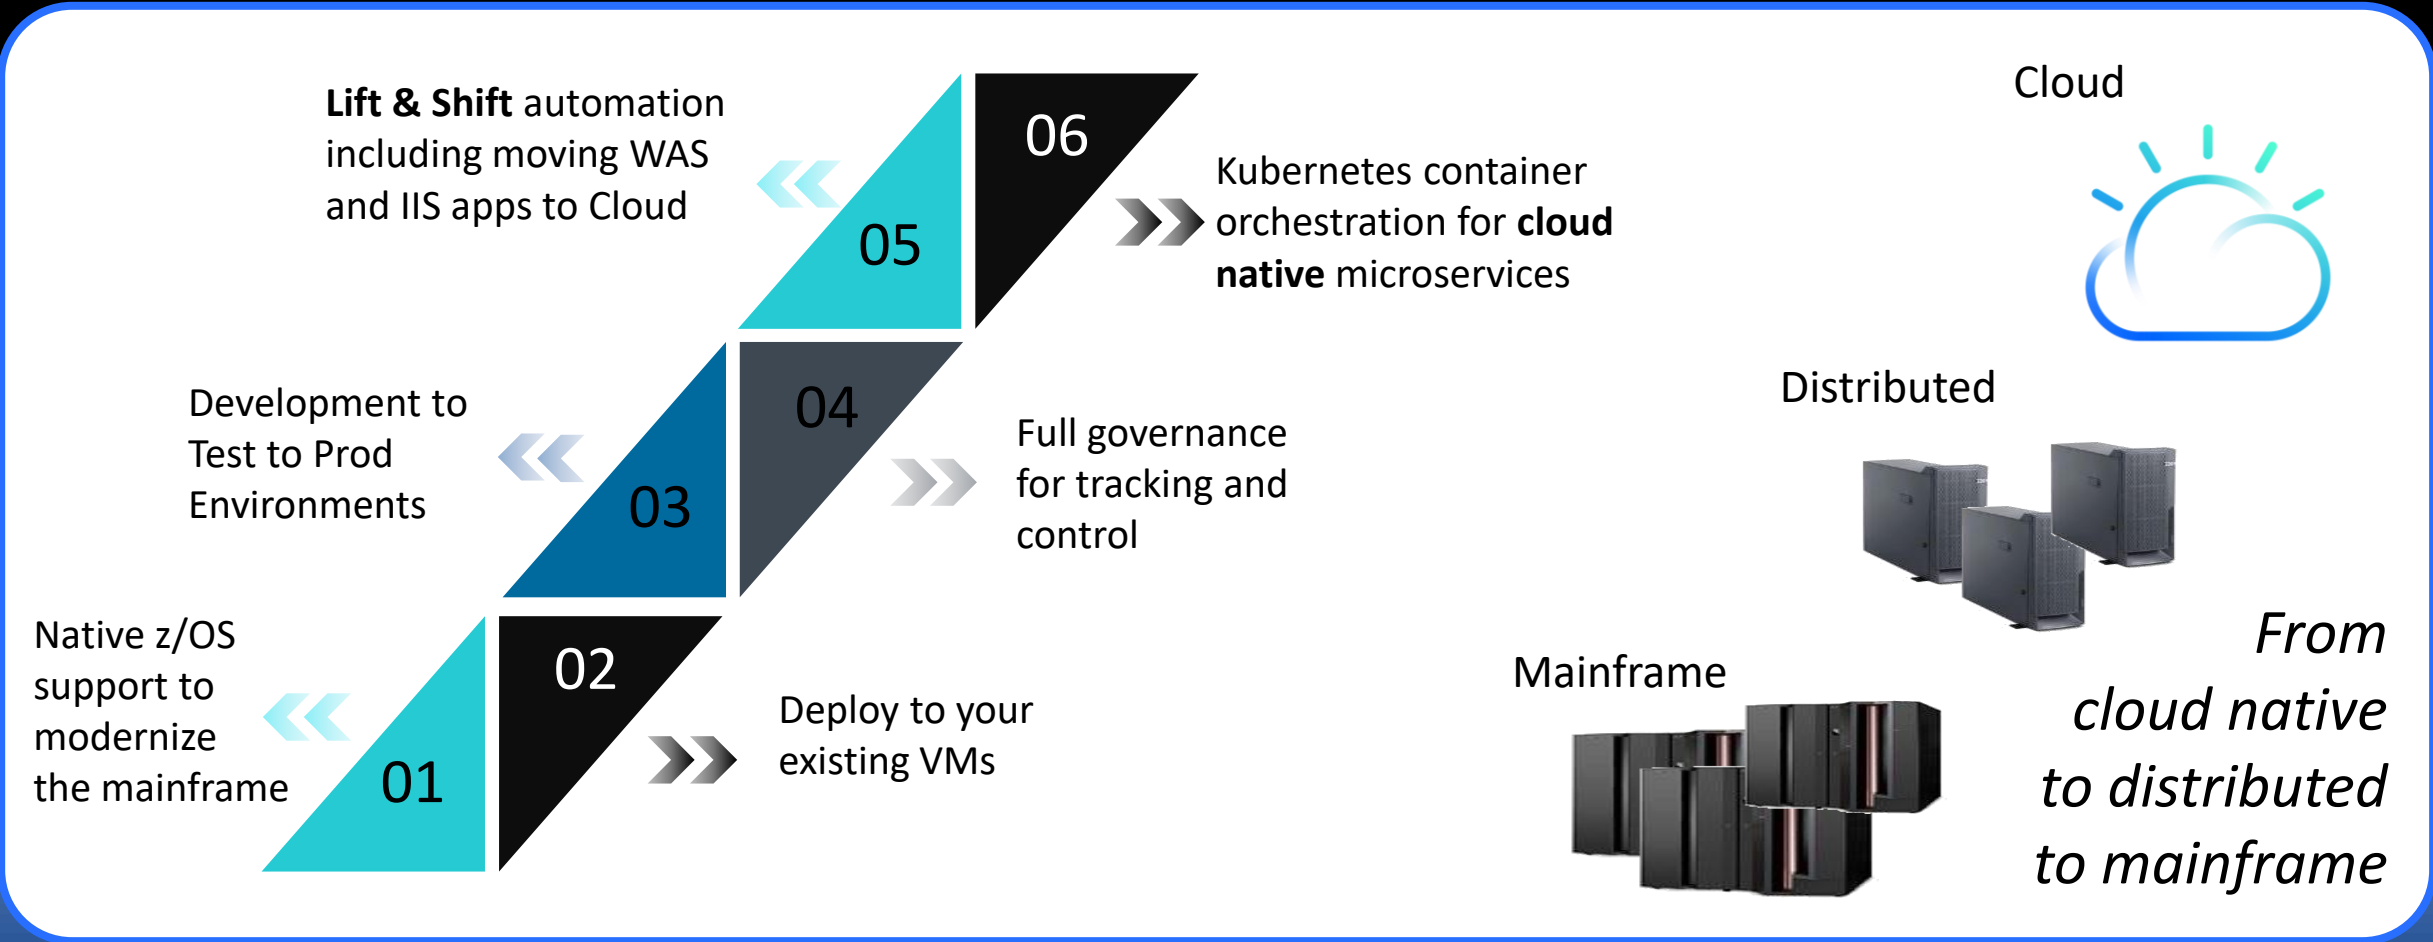

Delivery Team

Go beyond traditional Agile views to provide end-to-end value stream transparency

Why UrbanCode Deploy

UrbanCode Deploy is designed to support the complex enterprise

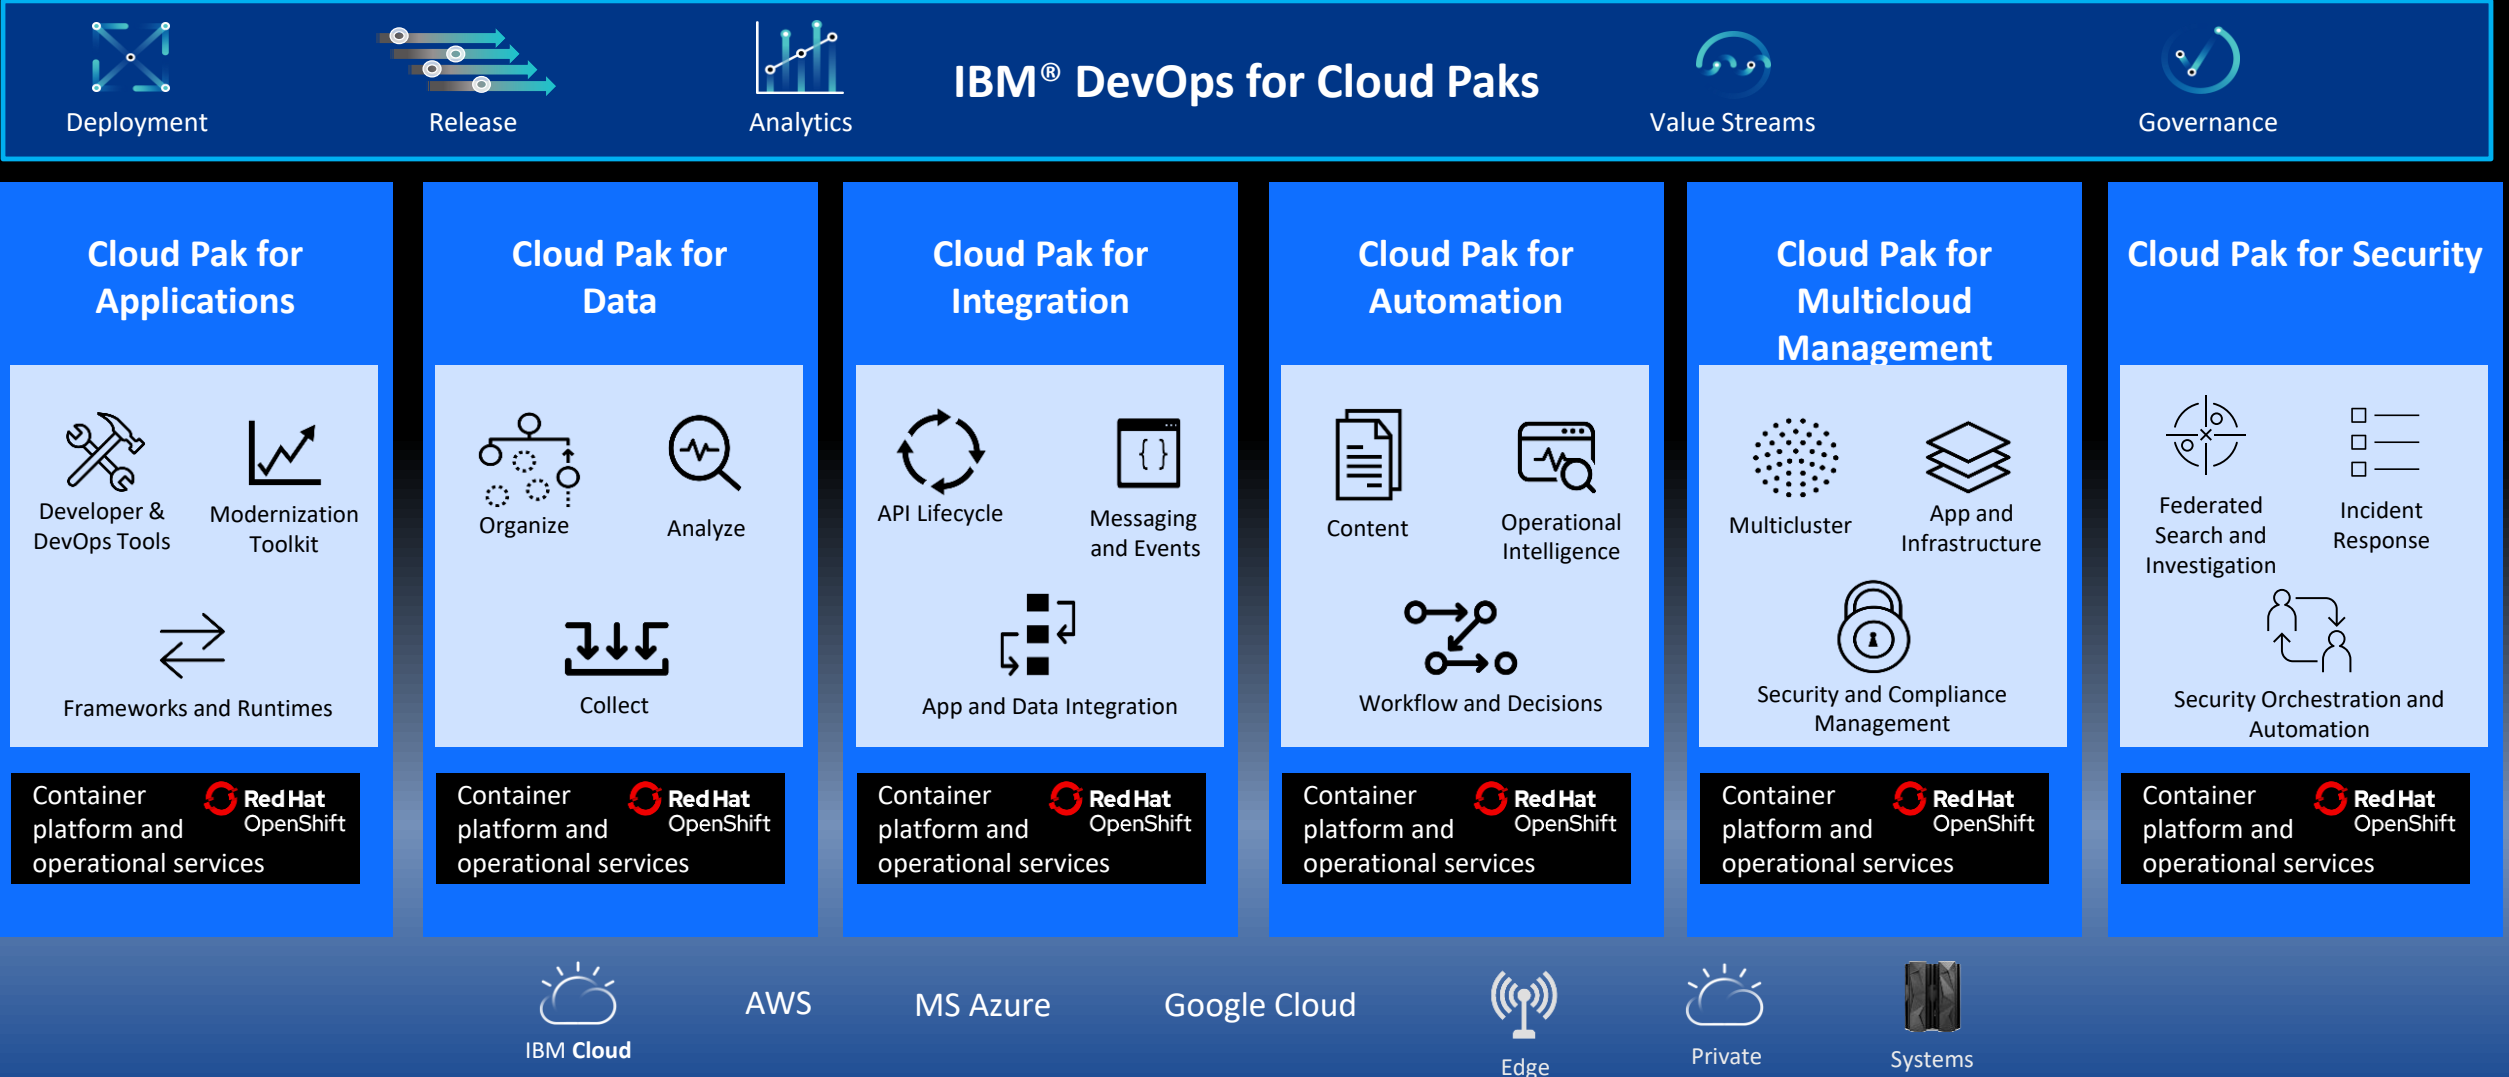

UrbanCode Plugin EcoSystem

Integration support for over 300 technologies

Complementing the IBM Cloud Paks

Connecting Cloud Native and Traditional on premises

IBM DevOps complements Cloud Pak for Applications

IBM Cloud Pak for Applications

IBM **WebSphere®**

JBoss
By Red Hat

 **Kabanero**

 **IBM MobileFirst**

IBM DevOps for Cloud Paks

Automate all types of functional, UI, API and performance testing

Multiple plugins. Discover topologies, automate deploys, manage config and upgrade

Virtualize web services to disconnect traditional MW from modernized apps at test time

Out of the box plugin for deployment

Pick up builds for deployment and test them
Trigger Kabanero pipelines

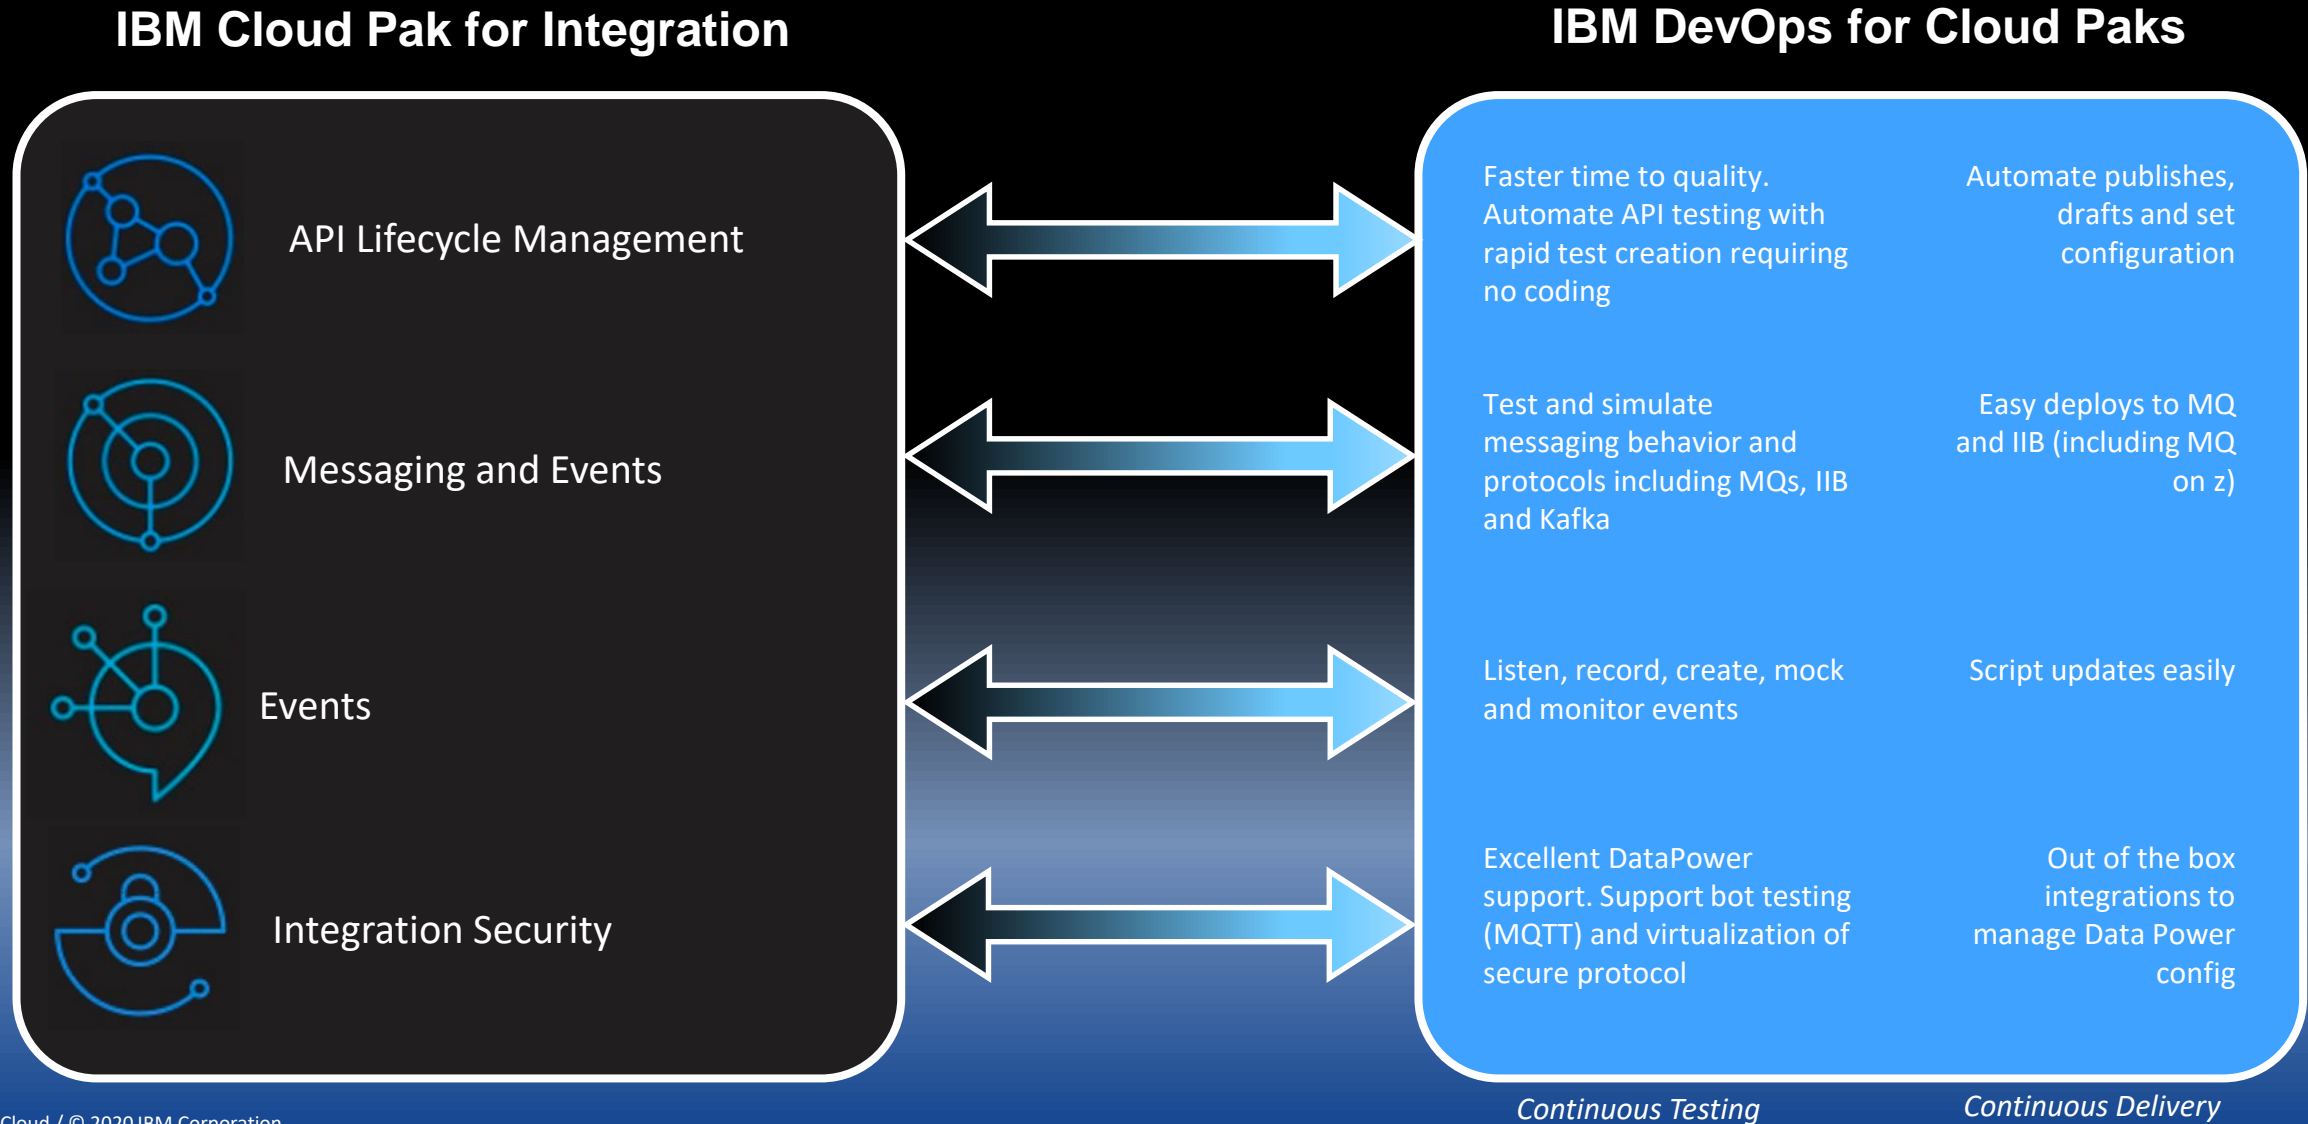

Native and web mobile app testing on device clouds

Out of the box plugin for deployment

Continuous Testing

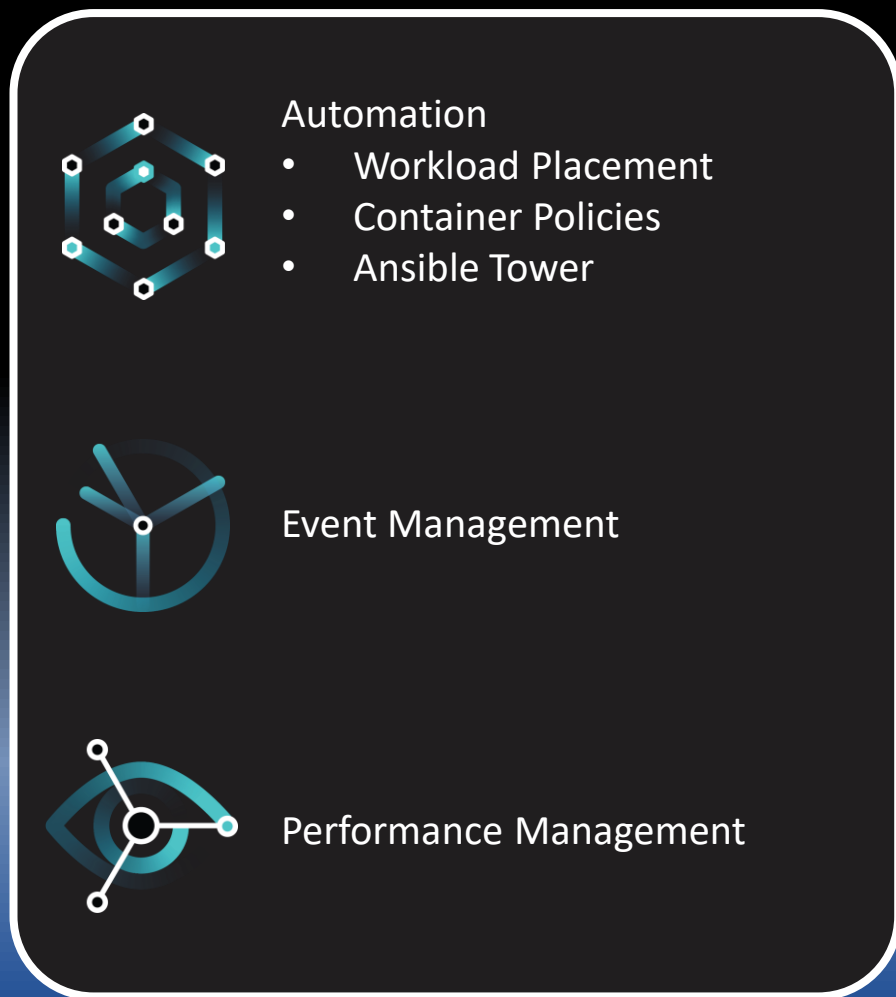

Continuous Delivery

IBM DevOps complements Cloud Pak for Integration

IBM DevOps complements Cloud Pak for Multicloud Management

IBM Cloud Pak for Multicloud Management

IBM DevOps for Cloud Paks

- 1) **Bill of Materials** - what versions of policies were used to deploy
- 2) **Governance** - environment based security, approvals, gates
- 3) **Auditability** - persisted deployment log and audit
- 4) **Pipeline Views** - consolidated, application centric views
- 5) **Inventory Views** - seamlessly “catch” provisioned environments

Automatically notify Cloud Pak for Multicloud Management of Pipeline driven changes

Import Application Performance Monitoring data from within Performance Testing

Continuous Testing

Continuous Delivery

Demo

Why IBM DevOps for Cloud Paks?

Business Values

- ✓ **Govern application release automation:** Invest in one enterprise deployment automation tool that tracks who deployed what where when. Be audit ready.
- ✓ **One tool to deploy changes to any platform or application:** A single solution for application release automation across traditional VMs, container services, z Systems, and both public and private cloud.
- ✓ **Scale deployments to the size of the enterprise.** Deploy applications to 10s of thousands of endpoints, run millions of deployments.
- ✓ **Use Value Stream Management** to find bottlenecks in the continuous delivery process and gain data driven insights.

Quantifiable Benefits

- ✓ 75% faster deployment times, resulting in faster time-to-market for new features and services.
- ✓ Reduced cost of a release by up to 97%.
- ✓ Improved stability via repeatability and standardization of the deployment process.
- ✓ Increased visibility into the release process.
- ✓ Improved customer satisfaction

Deliver Software anywhere faster

Don't sacrifice quality or security

Governance and Flow that scales

Why IBM?

- ✓ Deployment support for multiple platforms and application types (cloud native, traditional VM, and z Systems)
- ✓ **Use tools you already have.** 100s of integrations leverage your existing application delivery investments.
- ✓ Offers **first class support** for Red Hat OpenShift as well as highly certified common services incl. monitoring, logging & security
