Business challenge

When large financial institutions expressed interest in adopting its mobile payments solution, Dream Payments needed a fast, flexible way to deploy hosting infrastructure for enterprise customers.

Transformation

Evaluating Amazon Web Services (AWS), IBM and Microsoft offerings, Dream Payments chose an IBM Cloud solution. With IBM Cloud for VMware Solutions technology, the company migrated to an IBM® Bluemix® environment, gaining access to high-performance cloud resources for quick, easy deployment.

"IBM has been a great partner in regards to sharing industry knowledge, opening doors and advising on best practices for migrating to cloud."

—Chad Whittaker, Chief Information Officer, Dream Payments

Business benefits

Supports compliance
with Payment Card Industry (PCI) regulations by retaining low-level access to bare metal servers

Speeds time to market
and boosts innovation with a scalable cloud environment for easily launching new projects

Backs payment network
with bank-grade reliable infrastructure

Dream Payments

Transforming delivery and bringing mobile payment capabilities to the enterprise

Dream Payments is a financial technology (fintech) company that powers commerce and payment services across mobile devices and the Internet of Things (IoT). Financial institutions and merchant acquirers use the organization's payment as a service (PaaS) platform to provide mobile point of sale (POS) applications, next-generation payment terminals and value-added services securely to their business customers. Established in 2014, Dream Payments is an IBM Business Partner with headquarters in Toronto, Canada and operations in Moncton, Canada and Stamford, Connecticut.

Solution components

- IBM® Bluemix®
- IBM Cloud for VMware Solutions
