

Open Liberty

Liberty Quarterly Update 20.0.0.10-20.0.0.12

Alasdair Nottingham – Liberty Lead Architect

 @nottycode

Agenda

Part 1: 10 Minute Liberty overview

Part 2: What is new this quarter

Part 3: Q&A

10 minute overview

Why Choose Liberty

- Cloud Ready
 - Container optimized
 - Designed for dev/ops
 - Small disk footprint
 - Efficient memory usage
 - Fast startup
 - High throughput
 - Self-Tuned Thread Pool
- Developer friendly
 - Just enough application server
 - Fast inner loop with dev mode
 - Support for industry standard dev tools
 - Jakarta EE, Java EE, MicroProfile APIs
 - Zero Migration

What people are saying

- "Light operation and efficient operation (restart time can be reduced compared to ND)"
- "Ease of use small footprint ability to be built into a container"
- "It's the best tool for the job."
- "Easy to manage, Cloud Ready a Smart Product with cool feature. Modular flexible and fast."
- "Simple, well supported, cloud and container friendly."
- "Liberty is a fast-to-configure application server with some advantages over other similar products."
- "Simplicity of use."
- "Now that we have experienced Liberty, we are spoiled and want to stick to those easy, non-impacting migrations."

Starting to use this in my own projects. Thoroughly recommended. Keep up the great work @OpenLibertyIO team.

This Maven plugin is really a gamechanger for the development experience when it comes to developing @JakartaEE and @MicroProfileO applications on @OpenLibertyIO. Read my review here: rieckpil.de/joyful-open-li ...

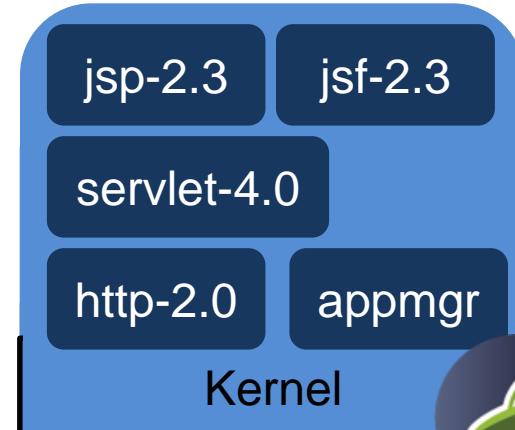

Just Enough Application Server

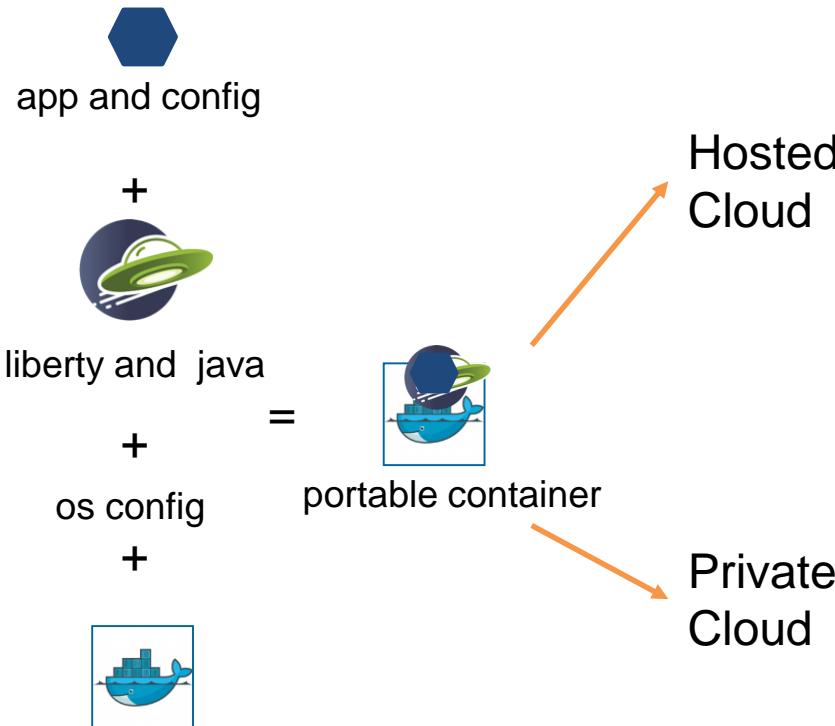

You control which features are loaded into each server instance

```
<feature>jsf-2.3</feature>
```

Liberty in Containers

```
FROM open-liberty  
ADD myapp.war /config/dropins/myapp.war
```

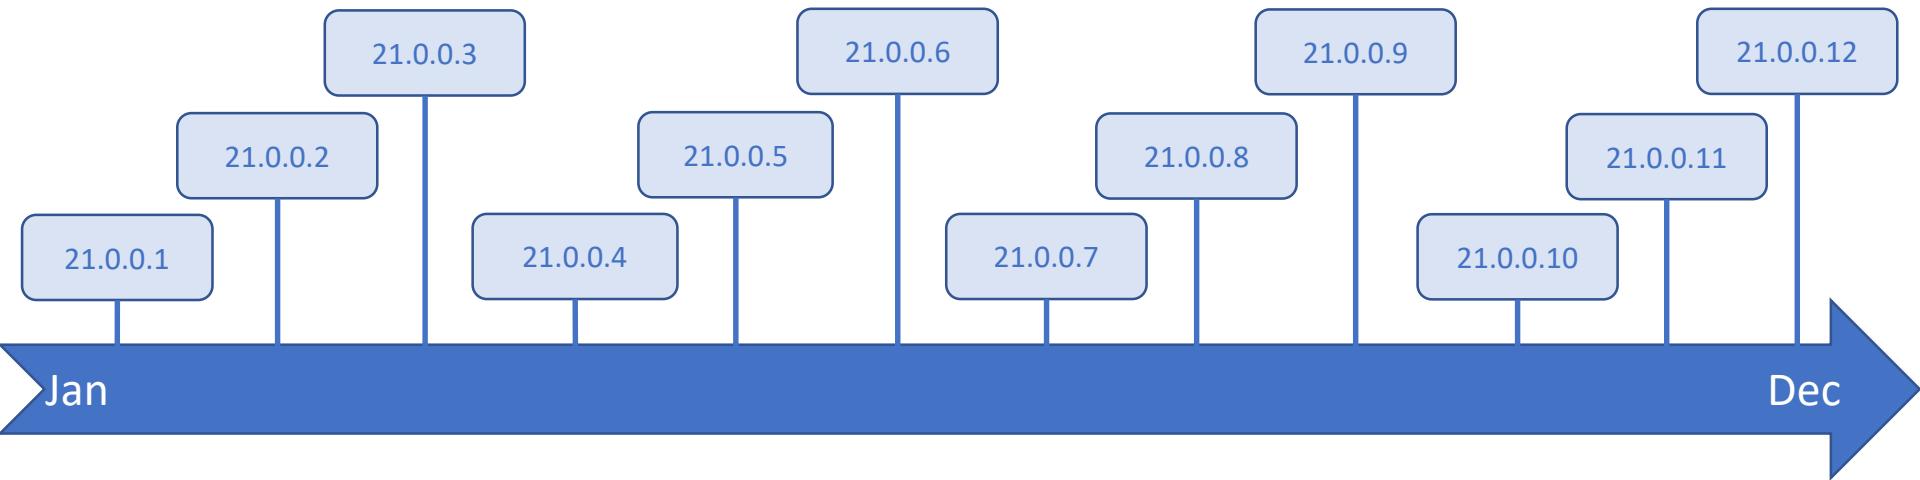

Liberty Zero Migration

- Zero config migration
 - Write once, run forever
- Zero app migration
 - No behavior changes in existing features
 - New behaviors in new features
- Choose your Java
 - Java 15, 11, 8
 - AdoptOpenJDK
 - IBM
 - OpenJDK
 - Oracle

How to get Support

WebSphere

z/OS
ND
Base
Core

WebSphere Hybrid Edition

IBM Integrated Application Runtimes

Java:

- WebSphere
- Liberty
- MicroProfile
- Jakarta EE
- OpenJ9

Cloud Foundry Migration Runtime

Transformation Advisor

Mono2micro

 Red Hat OpenShift

IBM WebSphere Hybrid Edition Summary

WebSphere Hybrid Edition is the destination for application workloads

- **Modernize:** Enables application and operational modernization
- **At Your Pace:** Run existing and new workloads side-by-side and transition to containers
- **Flexibility:** Simple, ratio-based deployment flexibility
- **Reduce Cost:** lower cloud costs by 75% - low disk & memory footprint, high throughput, without the compromises

WebSphere Hybrid Edition Bill of Materials

- WebSphere Application Server: WebSphere ND | WebSphere Base | Liberty Core | Open Liberty
- IBM Modernization & Developer Tools: Transformation Advisor | Mono2Micro | WebSphere Migration Toolkit
- IBM Cloud Foundry Migration Runtime

WebSphere Hybrid Edition Benefits

- Protects and optimizes existing WAS investment
- Complete set of tooling to begin or accelerate the modernization journey
- Cloud native dev, build, test, deploy experience
- Mix and match capabilities to change the solution mix over time with ratio-based deployments

WSHE – Runtimes & Ratios

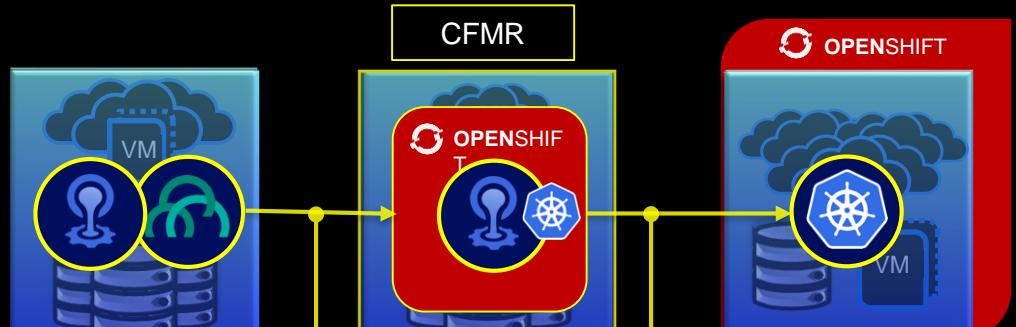

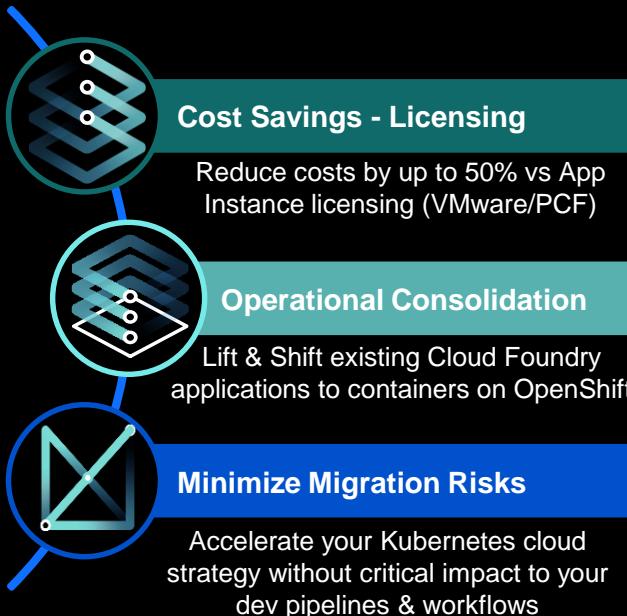

“Right-size” and modernize with flexible runtime options and ratios

- **EXAMPLE:** 1 VPC of WSHE entitles you to deploy 4 VPCs from:
 - Open Liberty
 - WebSphere Liberty Base
 - traditional WAS Base

Edition (Ratio)	Runtime					
	Liberty Core	Open Liberty	Liberty Base	tWAS Base	Liberty ND	tWAS ND
WAS ND (1:1)					✓	✓
WAS Base (4:1)		✓	✓	✓		
Liberty Core (8:1)	✓					

IBM Cloud Foundry Migration Runtime

Progressively transform Cloud Foundry applications to native Kubernetes on OpenShift with flexible common-sense licensing

Today

CFMR

OPENSHIFT T

OPENSIFT

Modernize to
OpenShift

Modernize to
CI/CD, GitOps

Establish a unified operational posture for future modernization initiatives with OpenShift

Adopt a pragmatic approach, mitigate disruption risks, & own the pace of migration.

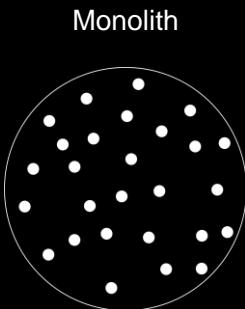

Mono2Micro

AI based automatic transformation of monoliths into microservices

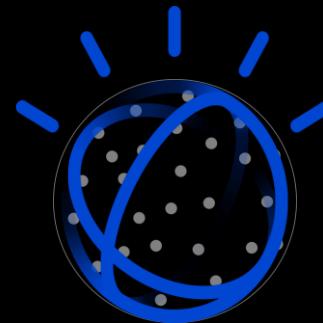

Unlock: Modernize and leverage existing investments

Mono2Micro's AI capabilities generate recommendations, semantic analysis and a significant portion of the code needed for refactoring

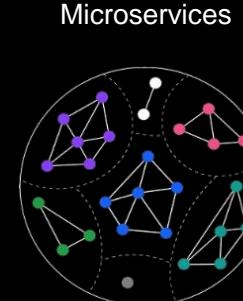

Microservice Generation Engine

AI identifies high cohesive, low coupling components

User can interactively refine recommended Microservices

Generated Microservices ready to be deployed

Generates code for communication between microservices

APIs

Focus areas

Developer Experience

APIs

Foundation

Orchestration

Security

Liberty Last Quarter Review

Security

- Support for ACME cert management and LetsEncrypt
- Liberty Database login using Kerberos
- Enforce cipher order with TLS

Dev Exp

- Liberty dev mode for containers
- Liberty Maven Tools 3.3
- Liberty Gradle Tools 3.1
- Open Liberty VS Code Tools includes MicroProfile Tools

Foundation

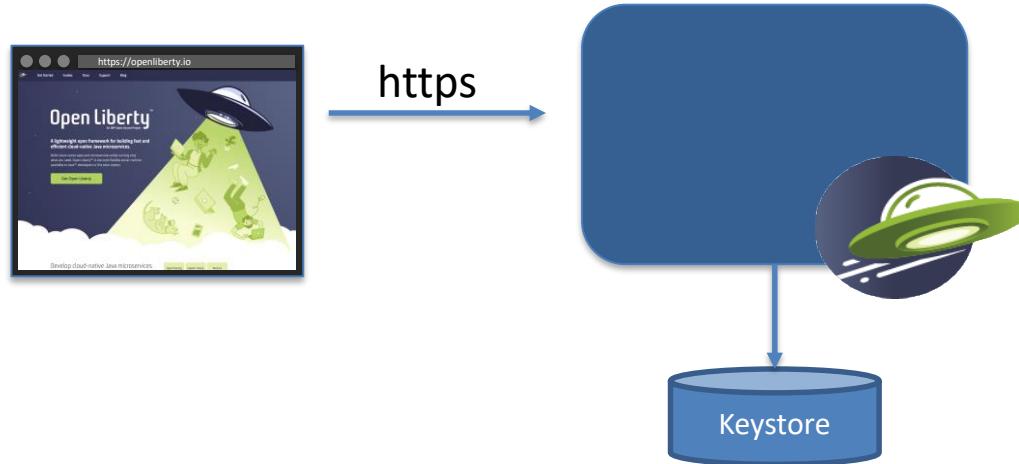

- Support for traditional WebSphere style EJB names

API

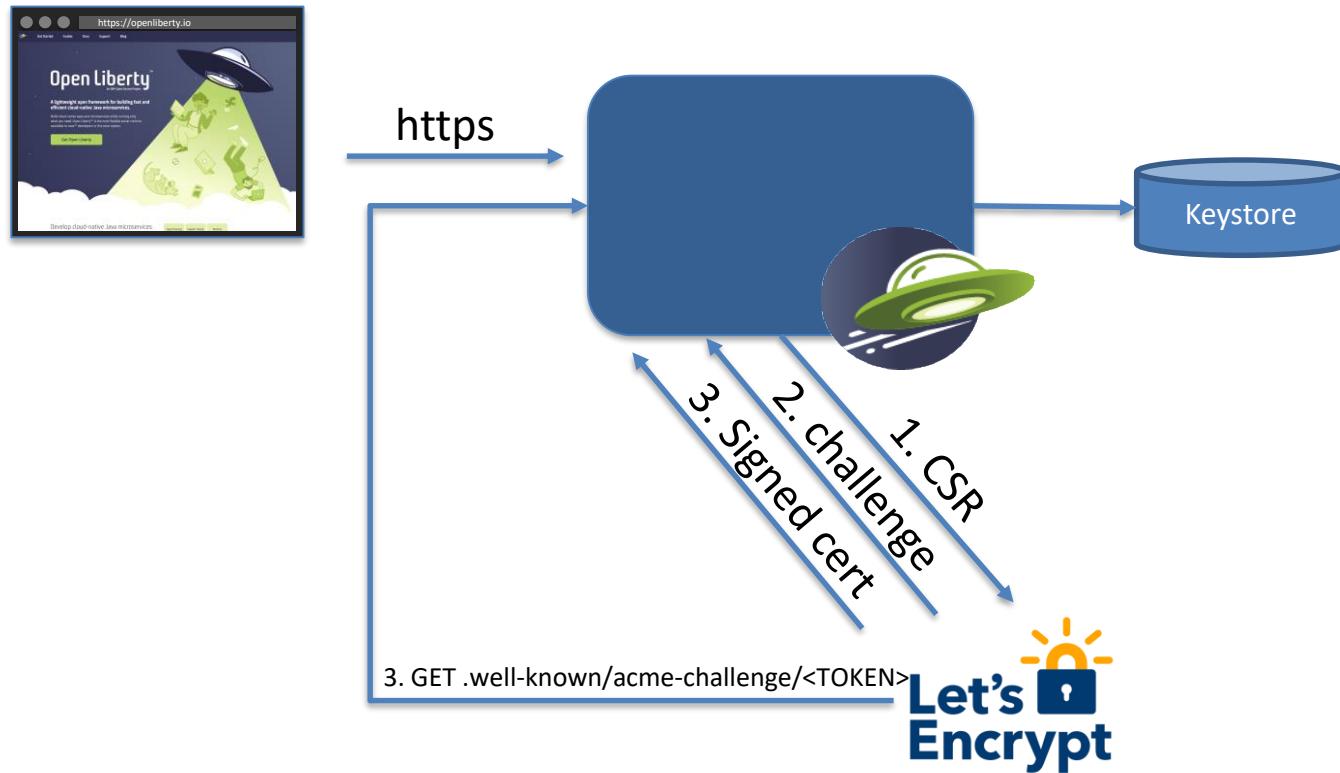

Orchestration

- Docker images using minimal kernel
- Red Hat DataGrid for HTTP Session replication

Automatic Certificate Management API

Automatic Certificate Management API

AMCE config

Use with LetsEncrypt

```
<featureManager>
  <feature>acmeCA-1.0</feature>
</featureManager>

<acmeCA directoryURI="https://acme-v02.api.letsencrypt.org/directory"
         renewBeforeExpiration="30d">
    <domain>my_host_name.domain.com</domain>
</acmeCA>
```

Use with corporate CA

```
<featureManager>
  <feature>acmeCA-1.0</feature>
</featureManager>

<acmeCA directoryURI="https://myca.mycompany.com/directory" >
    <domain>my_host_name.mycompany.com</domain>
</acmeCA>
```

Custom EJB bindings

- Liberty now supports EJB binding names from traditional WebSphere deployed applications
- EJB 2.x bean binding from ibm-ejb-jar-bnd.xmi

```
<ejbBindings xmi:id="BeanBinding_8" jndiName="ejb/SLCMTTxTimeoutHome">
    <enterpriseBean xmi:type="ejb:Session"
                    href="META-INF/ejb-jar.xml#SLCMTTxTimeout"/>
</ejbBindings>
```

- ejb/SLCMTTxTimeoutHome
- java:global/<app>/<module>/<bean>!<interface>

Custom EJB bindings

- Liberty now supports EJB binding names from traditional WebSphere deployed applications
- EJB 3.x bean binding from ibm-ejb-jar-bnd.xml

```
<session name="NoInterceptorBasicStateless">
    <interface class="com.ejbs.InventoryService"
        binding-name="ejb/Inventory"/>
```

- EJB bound to </session>
 - ejb/Inventory
 - java:global/<app>/<module>/NoInterceptorBasicStatelesscom.ejbs.InventoryService

Custom EJB bindings

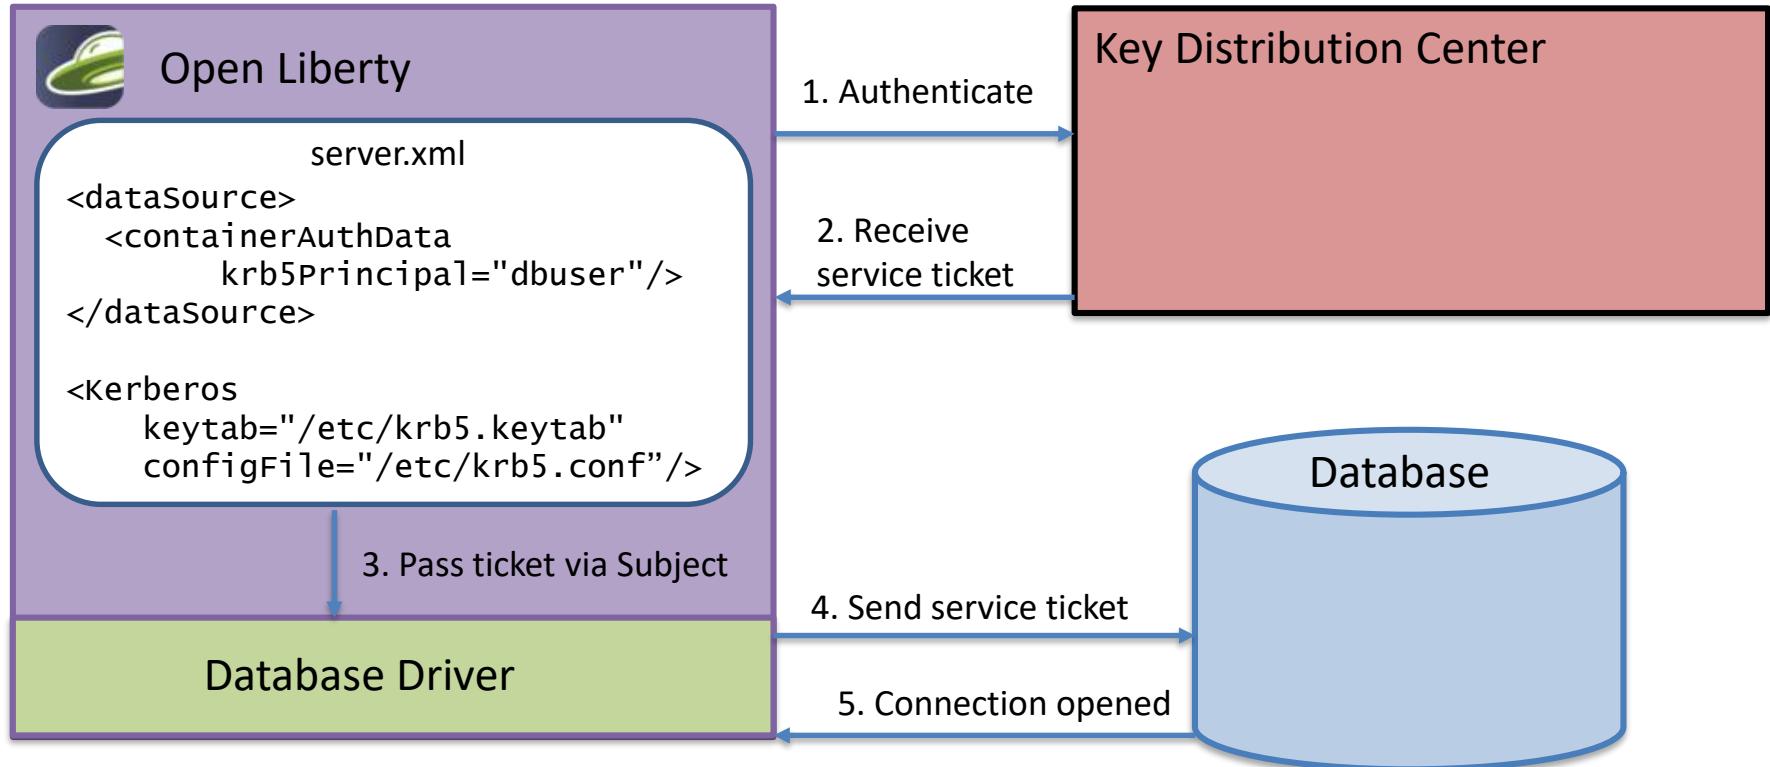

- Liberty now supports EJB binding names from traditional WebSphere deployed applications
- Override in server.xml

```
<ejbApplication location="EJBTest.jar">
    <ejb-jar-bnd>
        <session name="InventoryServiceBean">
            <interface class="com.ejbs.InventoryService"
                       binding-name="ejb/Inventory"/>
        </session>
    </ejb-jar-bnd>
</ejbApplication>
```

- EJB bound to:
 - ejb/Inventory
 - java:global/<app>/<module>/NoInterceptorBasicStatelesscom.ejbs.InventoryService

Kerberos authentication to Database

Config for Kerberos Authentication

Keytab Search order

1. server.xml
2. <user.home>/krb5.keytab

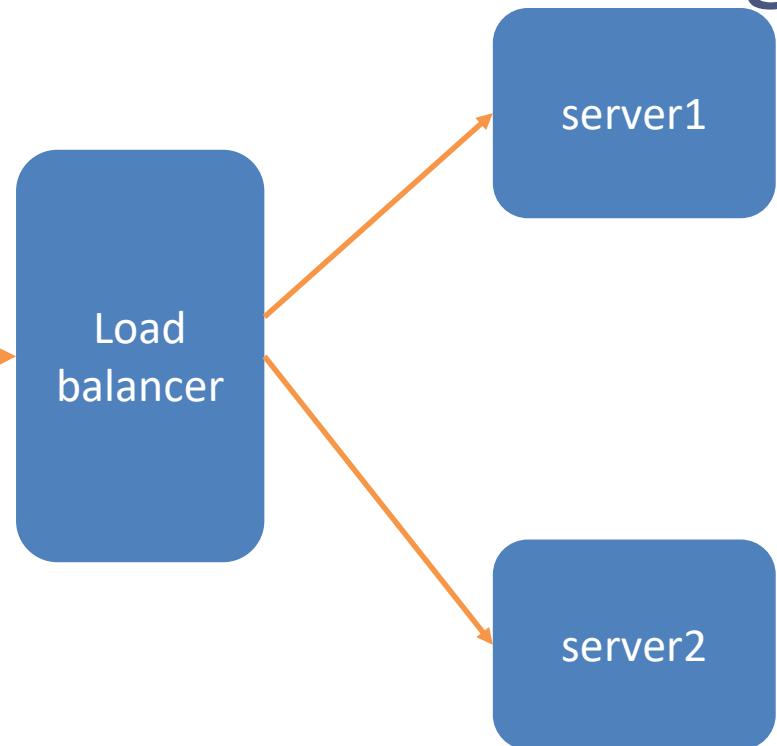

Credential Cache Search order

1. server.xml
2. KRB5CCNAME environment variable
3. /tmp/krb5cc_<uid>
4. <user.home>/krb5cc_<user.name>

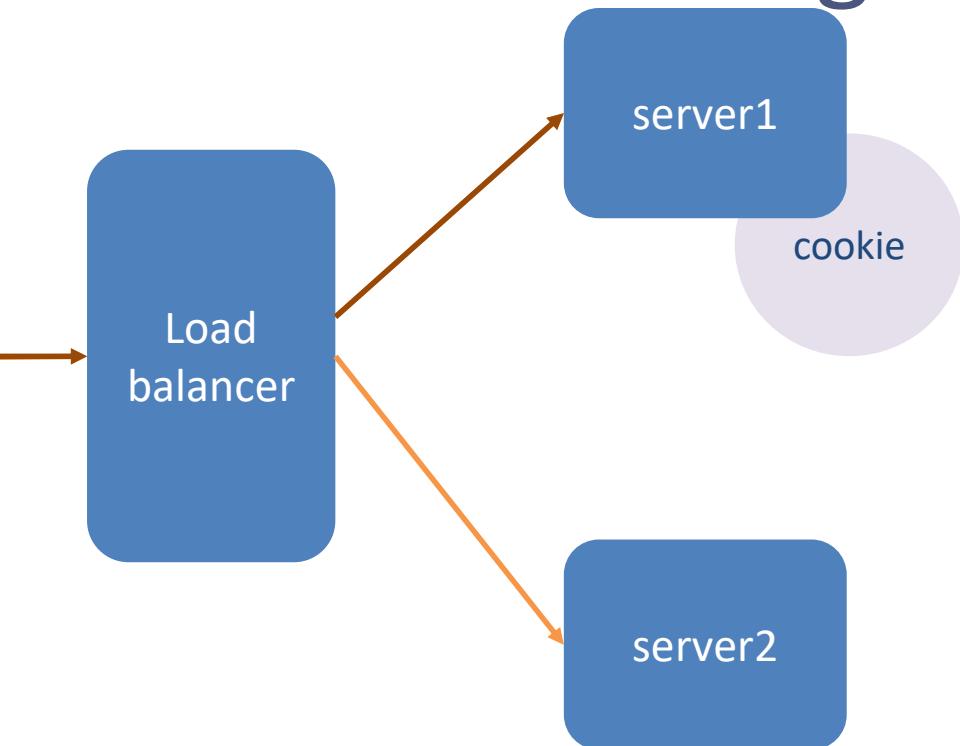

Server.xml

```
<containerAuthData id="krb"  
                   krb5Principal ="dbuser"  
                   krb5TicketCache= "/home/user/krb5cc"/>  
  
<kerberos keytab ="/etc/krb5.keytab"/>  
  
<dataSource jndiName="db/myDatabase"  
            containerAuthDataRef="krb"  
            </dataSource>
```

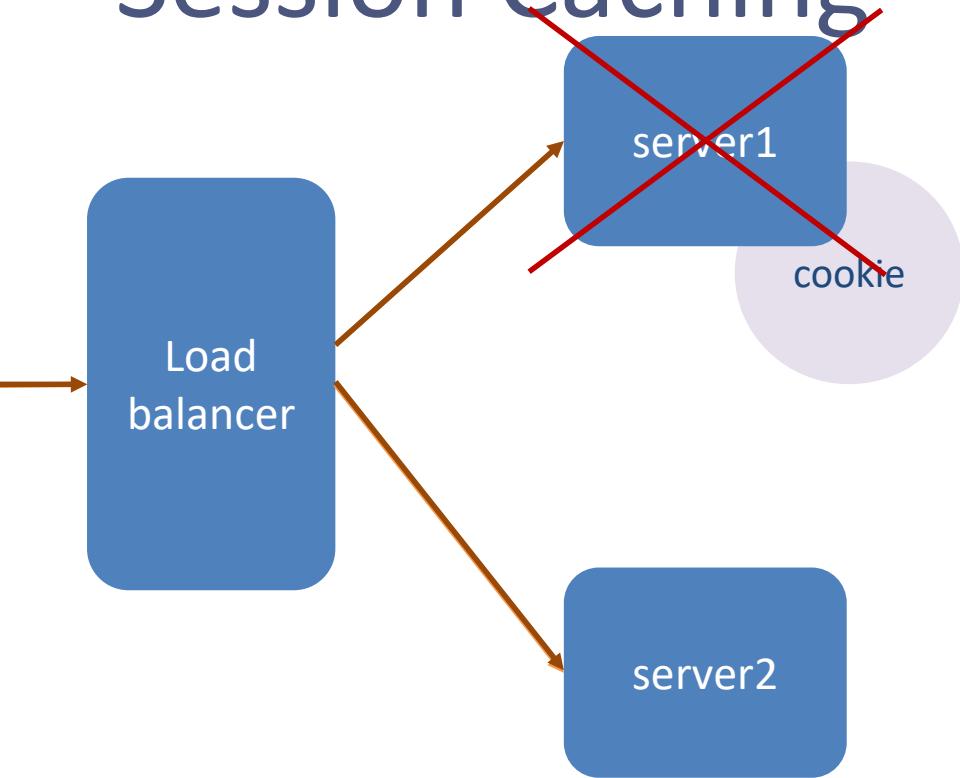

Session Caching

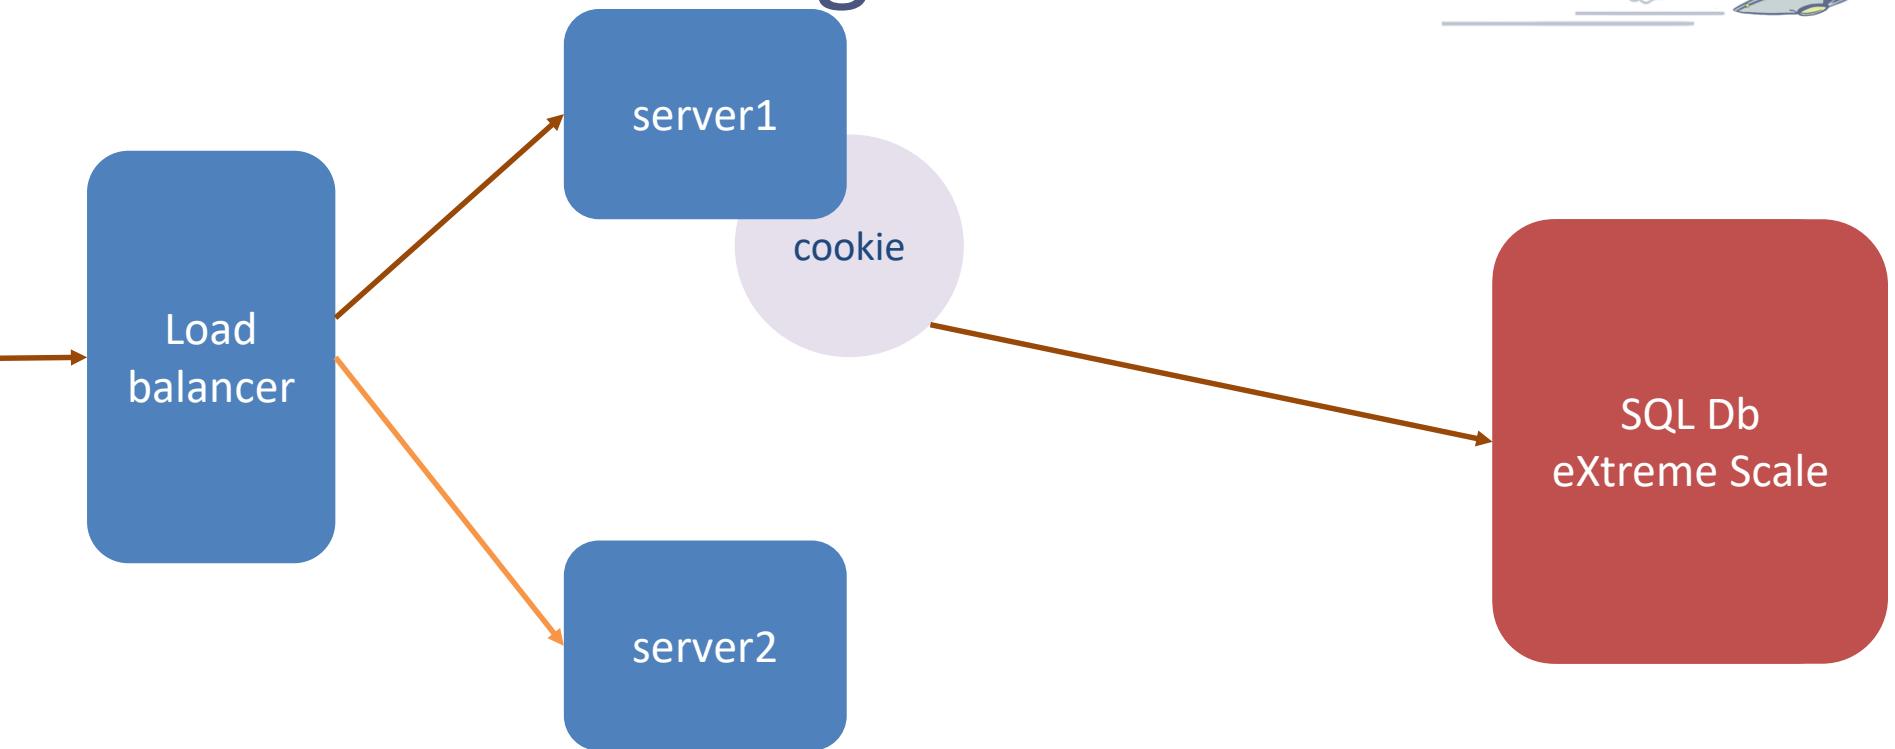

Session Caching

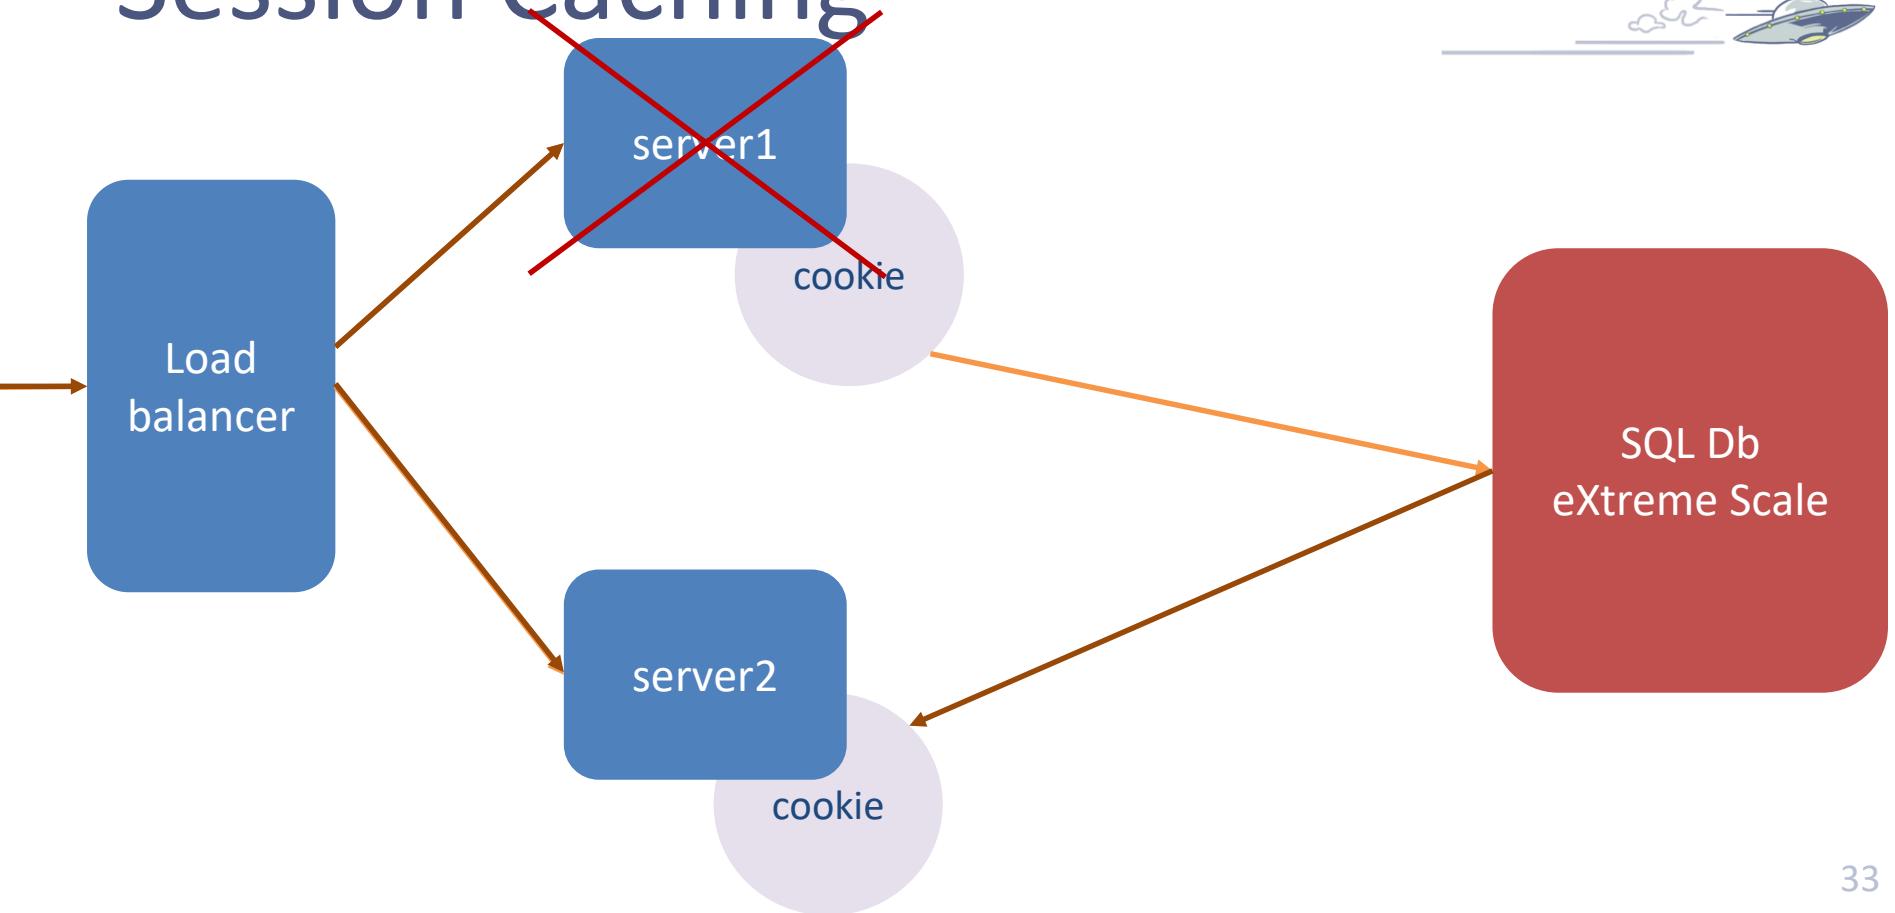

Session Caching

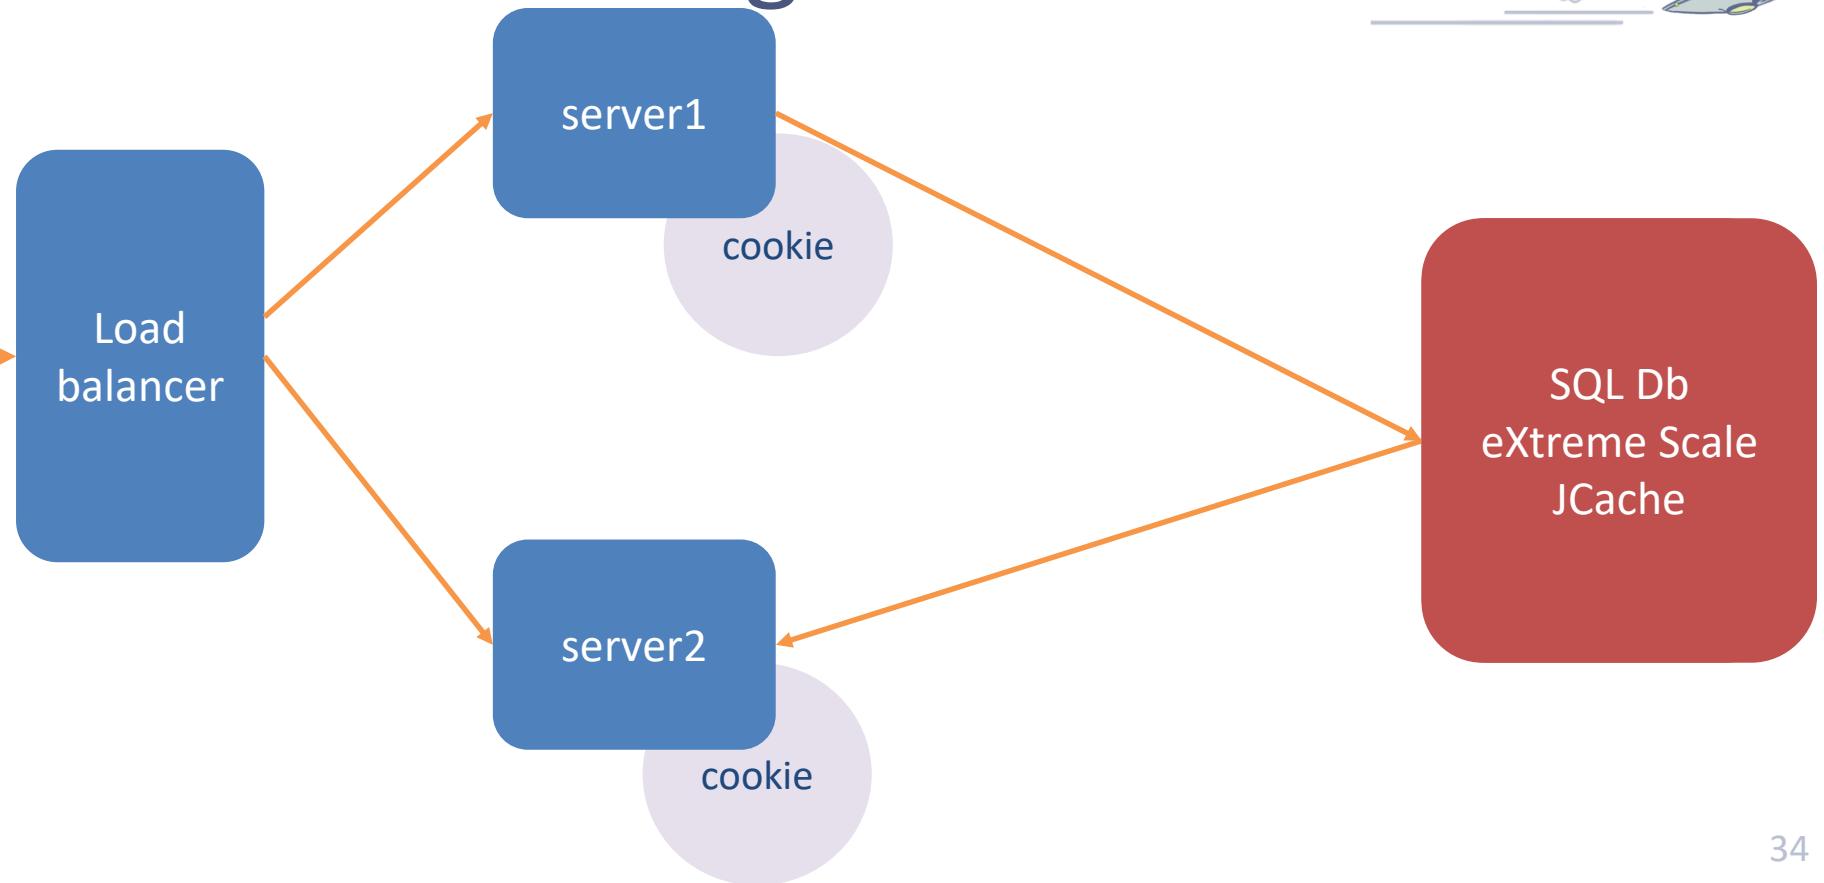

Session Caching

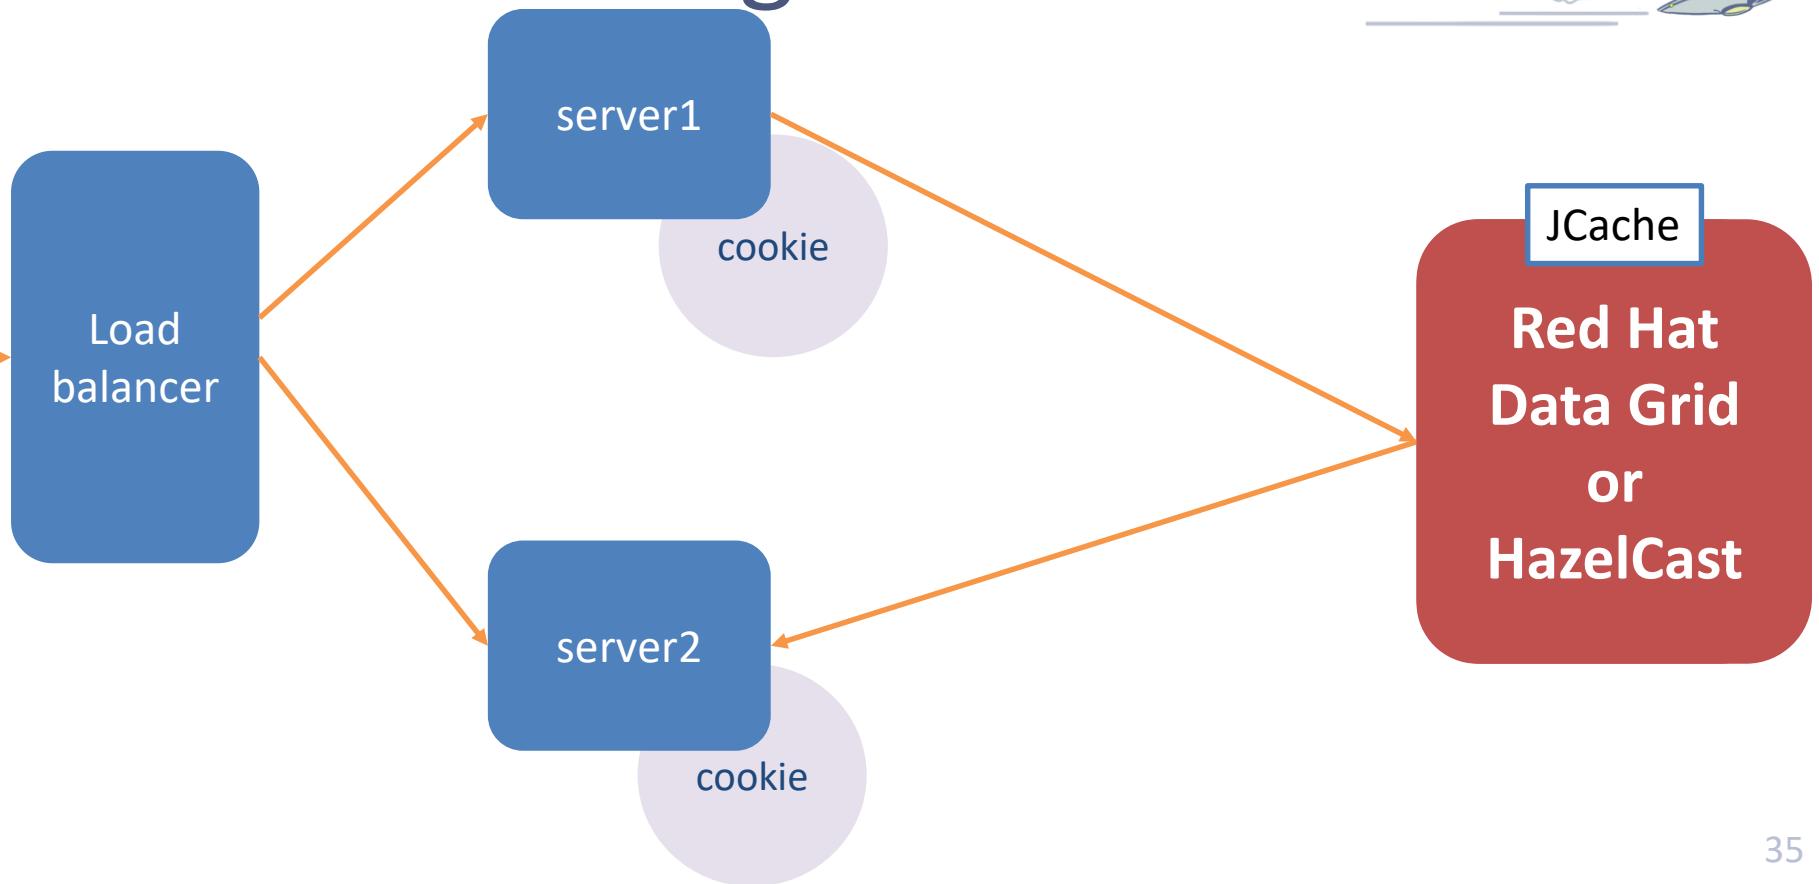

Session Caching

Session Caching

Session Caching

Configure Red Hat Data Grid

- Configure httpSessionCache with the Red Hat DataGrid client jars
- Provide location of the Red Hat instance and authentication creds

```
<httpSessionCache libraryRef="rhdgLib">
    <properties
        infinispan.client.hotrod.server_list="hostOne:11322;hostTwo:11322"
            infinispan.client.hotrod.java_serial_whitelist=".*"
            infinispan.client.hotrod.auth_username="cacheUser"
            infinispan.client.hotrod.auth_password="cacheUserPassword"
            infinispan.client.hotrod.auth_realm="default"
            infinispan.client.hotrod.sasl_mechanism="DIGEST-MD5"
            infinispan.client.hotrod.auth_server_name="infinispan"/>
</httpSessionCache>

<library id=" rhdgLib ">
    <file name="${server.config.dir}/lib/rhdg.jar"/>
</library>
```

Dev mode

- Maven
- Gradle
- Runs Liberty in local JVM
- Change source, automatic recompile and it runs in Liberty

demo-devmode — docker -x java -classpath ~/apache-maven-3.6.2/boot/plexus-classworlds-2.6.0.jar -Dclassworlds.conf=/Users/eric/apache-maven-3.6.2/bin/m2.conf -Dmaven...

[INFO] [AUDIT] CWWKZ0009I: The application demo-devmode-maven has stopped successfully.
[INFO] [AUDIT] CWWKT0016I: Web application available (default_host): http://18b4c22a0c82:9080/
[INFO] [AUDIT] CWWKZ0003I: The application demo-devmode-maven updated in 1.337 seconds.

SystemLivenessCheck.java — demo-devmode

```
1 package io.openliberty.sample.system;
2
3 public class SystemLivenessCheck {
```

localhost:9080/health

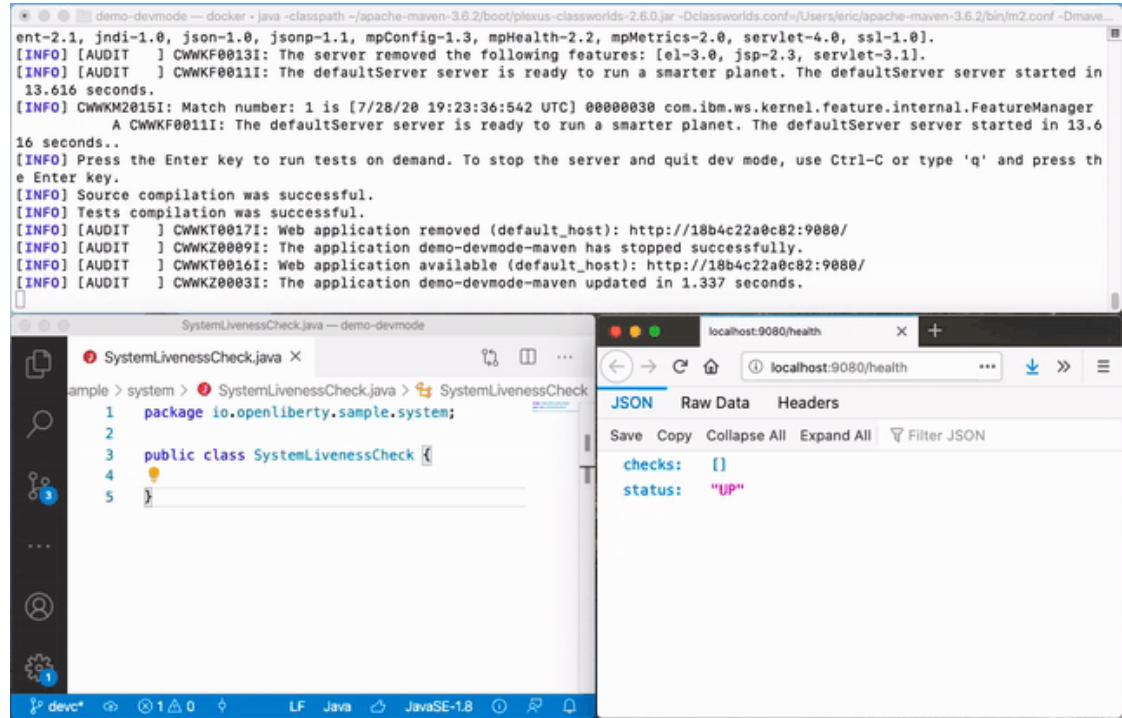

JSON	Raw Data	Headers
checks: []		
status: "UP"		

```
mvn liberty:dev  
gradle libertyDev
```

Dev mode for containers

- Maven
- Gradle
- Runs Liberty in a docker container
- Uses your production container image
- Allows local dev

```
mvn liberty:devc
gradle libertyDevC
```

Labs, Questions

WebSphere Liberty Virtual POT

Download the operating system specific content zip file from either

<https://ibm.box.com/WASLibertyVPoT> (fast - about 10 minute download)

<https://public.dhe.ibm.com/ibmdl/export/pub/software/websphere/wasdev/pot/> (slower
but firewall friendly – about 1 hour download)

Open Liberty Guides

- Hands-on learning in ~20 minutes
- 52 guides
 - MicroProfile & Jakarta EE
 - Open Shift, Docker, Kubernetes Istio
- Latest Guides
 - *Authenticating users through social media providers*
 - *Deploying microservices to OpenShift by using Kubernetes Operators*

The screenshot shows the 'Guides' section of the Open Liberty website. At the top, there's a navigation bar with links for 'Get Started', 'Guides', 'Docs', 'Support', and 'Blog'. Below that is a search bar with a 'Filter guides' button. The main content area has a dark header with the word 'Guides' and a subtitle 'The quickest way to learn all things Open Liberty, and beyond!'. On the left, there's a sidebar with categories: 'DEVELOP (37 guides)', 'BUILD AND TEST (9 guides)', and 'DEPLOY (9 guides)'. Under 'DEVELOP', there are links for 'Getting started', 'RESTful service', 'Reactive service', 'Configuration', 'Fault tolerance', 'Observability', 'Security', 'Persistence', and 'Client side'. Under 'BUILD AND TEST', there are links for 'Build', 'Test', and 'Containerize'. Under 'DEPLOY', there are links for 'Kubernetes' and 'Cloud deployment'. The main area contains a grid of cards, each representing a guide. The first card in the first row is titled 'Developing your cloud-native application' under the 'Getting started' category, with a duration of '25 minutes'. The second card in the first row is titled 'Getting started with Open Liberty' with a duration of '25 minutes'. The third card in the first row is titled 'Injecting dependencies into microservices' with a duration of '15 minutes'. The second row contains three cards under the 'RESTful service' category: 'Creating a RESTful web service' (30 minutes), 'Consuming RESTful services with template interfaces' (20 minutes), and 'Consuming a RESTful web service' (25 minutes). The third row contains three cards: 'Documenting RESTful APIs' (20 minutes), 'Creating a hypermedia-driven RESTful web service' (30 minutes), and 'Consuming RESTful services asynchronously with template interfaces' (15 minutes).
