Data integration is a critical aspect of an information architecture that enables your organization to adapt, transform, innovate. As a market leading offering, DataStage continues to evolve with your business needs.

DataStage as-a-service is build on *cloud-native architecture with an easy-to-use design interface and parallel engine you have come to trust* - delivered on IBM cloud.

Data Engineers can focus on developing flows using an intuitive flow design, which accelerate the time to develop flows and scale as-needed without worrying about procuring and managing hardware infrastructure.

A Beta release includes a specific set of stages and connectors you can use to build new flows. If you are an existing DataStage user - you can import your existing flows to run jobs on cloud.

Your participation in a Beta program provides us with an opportunity to hear directly from you - our customers and users - as we design and build the next generation of data integration.

## Who should sign up?

- Existing DataStage and Information Server users
- Organizations who wish to focus on development, not administration
- Users who want elasticity and scalability with the convenience of managed environment.

## Why join?

- **Hands-on experience** and use of new interface and design
- **Share feedback directly with product team** and influence as we build the next release work with product teams
- **Shape the product's future** providing feedback, ideas and domain expertise.
- Sneak peek of product design and roadmap

## What to expect after you register

### November 2020

Participant registration begins for IBM DataStage as-a-Service

### December 2020

Beta program kickoff with registered users - view product demo and overview of program participation

### January 2021

Engagement with users to gather feedback

### Early February 2021

Open Beta program ends. Beta Users complete final survey and can continue to use the service

### As we move forward

Stay informed via quarterly updates on how your feedback is influencing product direction.
