

# Automating License Compliance and Resource Optimization

—

AJ Nish, Head of Product, Turbonomic  
Steve Schmidt, VP Product Management, Flexera

# IT leaders are facing unprecedented challenges

The great digital shift

**10 years**

of digitization in under **1 year**

McKinsey  
& Company

Skills shortage

**\$8.5T**

Unrealized revenue by  
2030 due to skills  
shortage

Limited visibility

**<25%**

Less than 25% of IT  
leaders have complete  
visibility into their IT  
estates

Inability to maximize ROI

**74%**

Of IT leaders are  
challenged to find ways  
to optimize technology  
asset use

# To support business imperatives, IT leaders need to address **key challenges**

Lack of comprehensive visibility of resources, licensing and applications across the hybrid cloud, multi-vendor IT estate

Ensuring application performance to support business outcomes

Manual efforts to correlate insights across platforms to control license costs and optimize resource investments

Maintaining license compliance to avoid penalties and reduce security exposures

With software now accounting for 34% of IT budgets\*, leaders must balance the unique requirements of licensing and application performance

## Software licensing

- License visibility
- Compliance
- Optimize license spend
- Version control

## Application performance

- Satisfy priority workloads
- Infrastructure optimization
- Resource allocation

# Flexera One differentiators

DIFFERENTIATORS

## DEFINITIVE TECHNOLOGY RESOURCE DATA

## CONSUMPTION INTELLIGENCE

## AUTOMATED PORTFOLIO GOVERNANCE

## HYBRID IT OPTIMIZATION

BUSINESS VALUE

Gain comprehensive visibility into the environment from data center to SaaS to cloud

- Informed financial and operational decision making
- Reduce obsolescence and security risk

Save up to 30% by applying use rights and rightsizing investments

- Manage compliance
- Rightsize environment
- Workload placement

Automate processes to optimize the environment and seamlessly feed data into the ecosystem

- Increase business agility
- Guardrails for compliance and control

Negotiation readiness with IBM, Microsoft, Oracle, SAP, Salesforce and more

- Optimize consumption and spend
- Negotiation readiness
- Vendor performance

FEATURES

- Discovery
- Technopedia
- Identification engine (normalize and enrich)

- Packages and entitlements
- BYOL use rights
- Utilization cloud/SaaS resources
- Migration workloads

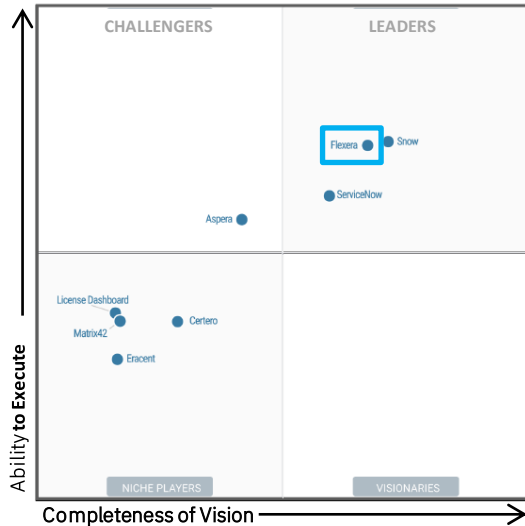

- Ecosystem collaboration/integration
- Policies
- Reconciliation engine
- APIs

- Technology spend dashboard
- Vendor workspaces

# Analysts recognize our industry-leading asset and cloud management capabilities

# IBM Automation helps you simplify the complexities of license compliance and resource optimization

1

**Automated license compliance and optimization**

Shared insights and integrations help organizations automate license compliance and optimize license and resource investments

2

**Choice and flexibility for IBM software license management**

Organizations can now manage their hybrid cloud and multivendor environment while satisfying audit reporting requirements for IBM Software compliance

3

**Market leading technology backed by IBM**

Flexera One with IBM Observability is available as part of the IBM Automation AIOPs portfolio, backed by IBM support and SLAs, giving organizations a single source option for Flexera and Turbonomic technologies

# IBM delivers visibility and insights to help IT leaders manage resource investments and application performance

## IT Asset Management with Flexera One with IBM Observability

**FLEXERA**

Visibility of IT assets, licenses and cloud spend across hybrid cloud, multi-vendor\* environments

Quantitative reference points to optimize technology spend

Version control and risk mitigation

## Application performance optimization with IBM Turbonomic

**turbonomic**  
an IBM Company

Automation to help ensure application performance

Infrastructure optimization

Resource allocation

\* Flexera One with IBM Observability IT Asset Management is certified as an alternative to IBM License Metric Tool for IBM Software audit reporting.

# Integration use cases

## 1Q2022 Announce / Availability

1. Enforce license compliance through automation
2. Optimize license use through automation

**turbonomic**  
an IBM Company

**Application Resource Management**

+ Policy-based automated resource management

License availability

Inventory and application use  
Infrastructure plan output

**Flexera**  
Inform IT. Transform IT.

**Flexera One with IBM Observability**

- IT Asset Management
- IT Visibility
- Cloud Cost Optimization
- Cloud Migration

3. Business Services view of how licenses are used
4. Inform License Planning with Infrastructure Plans

Enhanced dashboard views

## Integration Benefits:

- Eliminate “surprise billings” with automation to avoid excess license use
- Avoid end-of-service outages and reduce security vulnerabilities with improved version management
- Reduce license costs and re-negotiate services, informed by application and resource use
- Optimize future license and infrastructure budgeting with consolidated planning

# Use Case 1: Enforce License Compliance

## What:

Turbonomic generates automatable actions to enforce **compliance** with Flexera defined license constraints.

## Customer Value:

Customer is able to avoid surprise true-ups with their license vendor.

## Flexera Value

Flexera can offer their customers automated enforcement of compliance.

## Turbonomic Value

Customers will be more likely to allow automation of licensed workloads if Turbonomic is working with the customer's SAM vendor. Customers who automate are very unlikely to disable or remove Turbonomic.

# Use Case 2: Optimize License Cost

## What:

Turbonomic generates automatable actions to adjust physical and virtual licenses to match the exact workload resource demand, eliminating unnecessary spend.

## Customer Value:

Customer is able to safely reduce license costs to match exactly what they need.

## Flexera Value

Flexera can offer their customers automated optimization using Flexera data.

## Turbonomic Value

Every dollar Turbonomic helps a customer saves creates budget to justify owning Turbonomic.

Demo

# Better together: Automate the manual tasks of software license and resource optimization

Turbonomic and Flexera One with IBM Observability share license, application and resource insights to automate the increasingly complex tasks of software license compliance and resource optimization to streamline IT asset management.

**Eliminate the need to over-allocate resources** to support license workloads

**Avoid end-of-service outages** and **reduce security vulnerabilities** with improved version management

**Reduce license costs** and **re-negotiate services**, informed by application and resource use

**Optimize future license and infrastructure budgeting** with consolidated planning
